

**Asciminib** (chronic myeloid leukaemia, Ph+, after  $\geq 2$  prior therapies)

Resolution of: 16 March 2023

valid until: unlimited

Entry into force on: 16 March 2023

Federal Gazette, BAnz AT 12 04 2023 B2

**Therapeutic indication (according to the marketing authorisation of 25 August 2022):**

Scemblix is indicated for the treatment of adult patients with Philadelphia chromosome-positive chronic myeloid leukaemia in chronic phase (Ph+ CML-CP) previously treated with two or more tyrosine kinase inhibitors (see section 5.1).

**Therapeutic indication of the resolution (resolution of 16 March 2023):**

See therapeutic indication according to marketing authorisation.

**1. Extent of the additional benefit and significance of the evidence**

Asciminib is approved as a medicinal product for the treatment of rare diseases under Regulation (EC) No. 141/2000 of the European Parliament and the Council of 16 December 1999 on orphan drugs. In accordance with Section 35a, paragraph 1, sentence 11, 1st half of the sentence SGB V, the additional medical benefit is considered to be proven through the grant of the marketing authorisation.

The Federal Joint Committee (G-BA) determines the extent of the additional benefit for the number of patients and patient groups for which there is a therapeutically significant additional benefit in accordance with Chapter 5, Section 12, paragraph 1, number 1, sentence 2 of its Rules of Procedure (VerfO) in conjunction with Section 5, paragraph 8 AM-NutzenV, indicating the significance of the evidence. This quantification of the additional benefit is based on the criteria laid out in Chapter 5, Section 5, paragraph 7, numbers 1 to 4 of the Rules of Procedure (VerfO).

Adults with Philadelphia chromosome-positive chronic myeloid leukaemia in chronic phase (Ph+ CML-CP) previously treated with two or more tyrosine kinase inhibitors

**Extent of the additional benefit and significance of the evidence of asciminib:**

Indication of a minor additional benefit

## Study results according to endpoints:<sup>1</sup>

Adults with Philadelphia chromosome-positive chronic myeloid leukaemia in chronic phase (Ph+ CML-CP) previously treated with two or more tyrosine kinase inhibitors

### Summary of results for relevant clinical endpoints

Endpoint category	Direction of effect/ risk of bias	Summary
Mortality	↔	No relevant difference for the benefit assessment
Morbidity	↔	Overall, no relevant difference
Health-related quality of life	∅	No data available
Side effects	↑↑	Advantages in the endpoints of SAEs, severe AEs (CTCAE grade ≥ 3) and discontinuation due to AEs
Explanations: ↑: statistically significant and relevant positive effect with low/unclear reliability of data ↓: statistically significant and relevant negative effect with low/unclear reliability of data ↑↑: statistically significant and relevant positive effect with high reliability of data ↓↓: statistically significant and relevant negative effect with high reliability of data ↔: no statistically significant or relevant difference ∅: There are no usable data for the benefit assessment. n.a.: not assessable		

<sup>1</sup> Data from the dossier assessment of the G-BA (published on 2. January 2023), unless otherwise indicated.

ASCEMBL study: Asciminib vs bosutinib; controlled, randomised, open-label phase III study; data cut-off of 6.10.2021

### Mortality

Endpoint	Asciminib		Bosutinib		Intervention vs control

Abbreviations used:

AD = absolute difference; CTCAE = Common Terminology Criteria for Adverse Events; EQ-5D-VAS = European Quality of Life Questionnaire 5 Dimensions - Visual Analogue Scale; HR = hazard ratio; IRT = Interactive Response Technology; n.d. = no data; CI = confidence interval; MDASI-CML = M.D. Anderson Symptom Inventory - Chronic Myeloid Leukaemia; MedDRA = Medical Dictionary for Regulatory Activities; MCyR = Good Cytogenetic Response; MMRM = Mixed Model for Repeated Measures; MD = Mean Difference; N = Number of patients evaluated; n = Number of patients with (at least one) event; n.c. = not calculable; n.r. = not reached; PGI-C = Patient Global Impression of Change; PT = preferred terms; RR = relative risk; SD = standard deviation; SOC = system organ class; (S)AE = (serious) adverse event; vs = versus

## 2. Number of patients or demarcation of patient groups eligible for treatment

Adults with Philadelphia chromosome-positive chronic myeloid leukaemia in chronic phase (Ph+ CML-CP) previously treated with two or more tyrosine kinase inhibitors

Approx. 840 to 1,150 patients

## 3. Requirements for a quality-assured application

The requirements in the product information are to be taken into account. The European Medicines Agency (EMA) provides the contents of the product information (summary of product characteristics, SmPC) for Scemblix (active ingredient: asciminib) at the following publicly accessible link (last access: 12 December 2022):

[https://www.ema.europa.eu/en/documents/product-information/scemblix-epar-product-information\\_en.pdf](https://www.ema.europa.eu/en/documents/product-information/scemblix-epar-product-information_en.pdf)

Treatment with asciminib should only be initiated and monitored by specialists in internal medicine, haematology and oncology experienced in the treatment of patients with chronic myeloid leukaemia.

#### 4. Treatment costs

##### Annual treatment costs:

Designation of the therapy	Annual treatment costs/ patient
Medicinal product to be assessed:	
Asciminib	€ 88,815.73

Costs after deduction of statutory rebates (LAUER-TAXE®) as last revised: 1 March 2023)

Costs for additionally required SHI services: not applicable

#### 5. Medicinal products with new active ingredients according to Section 35a, paragraph 3, sentence 4 SGB V that can be used in a combination therapy with Asciminib

Medicinal products with new active ingredients pursuant to Section 35a, paragraph 3, sentence 4 SGB V are medicinal products with the following new active ingredients which, on the basis of the marketing authorisation under Medicinal Products Act, can be used in a combination therapy with asciminib for the treatment of adult patients with Philadelphia chromosome-positive chronic myeloid leukaemia in the chronic phase (Ph+ CML-CP) who have previously been treated with two or more tyrosine kinase inhibitors:

Adults with Philadelphia chromosome-positive chronic myeloid leukaemia in chronic phase (Ph+ CML-CP) previously treated with two or more tyrosine kinase inhibitors

- No active ingredient that can be used in a combination therapy that fulfils the requirements of Section 35a, paragraph 3, sentence 4 SGB V.

The designation of combinations exclusively serves the implementation of the combination discount according to Section 130e SGB V between health insurance funds and pharmaceutical companies. The findings made neither restrict the scope of treatment required to fulfil the medical treatment mandate, nor do they make statements about expediency or economic feasibility.
