Dokumentvorlage, Version vom 21.02.2019

Dossier zur Nutzenbewertung gemäß § 35a SGB V

Avapritinib (AYVAKYT®)

Blueprint Medicines (Germany) GmbH als örtlicher Vertreter des Zulassungsinhabers Blueprint Medicines (Netherlands) B. V.

Modul 4 A – Anhang 4G

Avapritinib (AYVAKYT®) ist als Monotherapie zur Behandlung erwachsener Patienten mit aggressiver systemischer Mastozytose (ASM), systemischer Mastozytose mit assoziierter hämatologischer Neoplasie (SM-AHN) oder Mastzellleukämie (MCL) nach zumindest einer systemischen Therapie indiziert.

Medizinischer Nutzen und medizinischer Zusatznutzen, Patientengruppen mit therapeutisch bedeutsamem Zusatznutzen

Stand: 01.04.2022

Anhang 4-G: Weitere Analysen und Kaplan-Meier-Plots zu den in Abschnitt 4.3.2.3 gezeigten Ergebnissen

Table 35.3.1.5
Summary of Concomitant Medications
AdvSM Population & Prior Neoplastic Therapy = Yes

	BLU-285-2101		
ATC Class Preferred Drug Name	200 mg (N=12) n (%)	<=200 mg (N=16) n (%)	All Doses (N=41) n (%)
Any Concomitant Medication	12 (100)	16 (100)	41 (100)
ACE INHIBITORS, COMBINATIONS	0	0	1 (2.4)
HYDROCHLOROTHIAZIDE;LISINOPRIL	0	0	1 (2.4)
ACE INHIBITORS, PLAIN	3 (25.0)	3 (18.8)	6 (14.6)
LISINOPRIL	2 (16.7)	2 (12.5)	4 (9.8)
ENALAPRIL	1 (8.3)	1 (6.3)	1 (2.4)
LISINOPRIL DIHYDRATE	0	0	1 (2.4)

Abbreviations: ATC = Anatomic Therapeutic Chemical; AdvSM = Advanced Systemic Mastocytosis
Note 1: Prior medications are excluded from this table. Concomitatnt medications are all medications taken anytime from the first dose of study drug to the last dose of study drug + 30 days.
Note 2: ATC Class and Preferred Drug Term are coded using WHO drug dictionary versions from each patient's respective study, as listed in the Statistical Analysis Plan.
Note 3: If a patient experiences more than 1 treatment within a given ATC Class or Preferred Drug Term, that patient is counted only once under that ATC Class or Preferred Drug Term, respectively.
Note 4: Percentages are based on the number of patients in the Safety Population in each column.
Note 5: ATC Classes are sorted alphabetically and Preferred Drug Terms are subsequently sorted in decreasing order of frequency using the 'All Doses' column.

Abbreviations: CIs=Confidence intervals, NE=Not Evaluable
Notes: Overall survival is defined as the time in months from the start of treatment to the date of death. Patients who die before or on the data cutoff date will considered to have had an overall survival event. All Patients who do not have a death record prior to or on the cutoff date are censored at the last date known alive.
[a] Median OS Follow-up is calculated from the Kaplan-Meier method switching the OS event/censored status, i.e. OS event as censored and censored as OS event

Median OS Follow-up[a] (months) (95% CI)	31.3 (21.5 - 39.4)	24.2 (18.6 - 30.7)	17.1 (9.5 - 31.8)	27.3 (19.0 - 31.3)

Abbreviations: CIs=Confidence intervals, NE=Not Evaluable
Notes: Overall survival is defined as the time in months from the start of treatment to the date of death. Patients who die before or on the data cutoff date will considered to have had an overall survival event. All Patients who do not have a death record prior to or on the cutoff date are censored at the last date known alive.
[a] Median OS Follow-up is calculated from the Kaplan-Meier method switching the OS event/censored status, i.e. OS event as censored and censored as OS event

Abbreviations: CIs=Confidence intervals, NE=Not Evaluable
Notes: Overall survival is defined as the time in months from the start of treatment to the date of death. Patients who die before or on the data cutoff date will considered to have had an overall survival event. All Patients who do not have a death record prior to or on the cutoff date are censored at the last date known alive.
[a] Median OS Follow-up is calculated from the Kaplan-Meier method switching the OS event/censored status, i.e. OS event as censored and censored as OS event

Abbreviations: CIs=Confidence intervals, NE=Not Evaluable
Notes: Overall survival is defined as the time in months from the start of treatment to the date of death. Patients who die before or on the data cutoff date will considered to have had an overall survival event. All Patients who do not have a death record prior to or on the cutoff date are censored at the last date known alive.
[a] Median OS Follow-up is calculated from the Kaplan-Meier method switching the OS event/censored status, i.e. OS event as censored and censored as OS event

Abbreviations: CIs=Confidence intervals, NE=Not Evaluable
Notes: Overall survival is defined as the time in months from the start of treatment to the date of death. Patients who die before or on the data cutoff date will considered to have had an overall survival event. All Patients who do not have a death record prior to or on the cutoff date are censored at the last date known alive.
[a] Median OS Follow-up is calculated from the Kaplan-Meier method switching the OS event/censored status, i.e. OS event as censored and censored as OS event

Summary of Overall Survival by Prior Antineoplastic Therapy
Studies: BLU-285-2101 and BLU-285-2202, AdvSM Population
Prior Anti-Neoplastic Therapy = No

Starting Dose: 400 mg

	ASM (N=0)	SM-AHN (N=0)	MCL (N=1)	All AdvSM (N=1)
Events			0	0
Censors			1 (100.0)	1 (100.0)
Kaplan-Meier Estimates				
Median (months) (95% CIs)			NE (NE -NE)	NE (NE -NE)
25th, 75th percentiles			NE, NE	NE, NE
3 Months (95% CIs)			100.0 (100.0 -100.0)	100.0 (100.0 -100.0)
6 Months (95% CIs)			100.0 (100.0 -100.0)	100.0 (100.0 -100.0)
9 Months (95% CIs)			100.0 (100.0 -100.0)	100.0 (100.0 -100.0)
12 Months (95% CIs)			100.0 (100.0 -100.0)	100.0 (100.0 -100.0)
18 Months (95% CIs)			100.0 (100.0 -100.0)	100.0 (100.0 -100.0)
24 Months (95% CIs)			100.0 (100.0 -100.0)	100.0 (100.0 -100.0)
30 Months (95% CIs)			100.0 (100.0 -100.0)	100.0 (100.0 -100.0)
36 Months (95% CIs)				
42 Months (95% CIs)				
48 Months (95% CIs)				
54 Months (95% CIs)				
Median OS Follow-up[a] (months) (95% CI)			35.2 (NE -NE)	35.2 (NE -NE)

Abbreviations: CIs=Confidence intervals, NE=Not Evaluable
Notes: Overall survival is defined as the time in months from the start of treatment to the date of death. Patients who die before or on the data cutoff date will considered to have had an overall survival event. All Patients who do not have a death record prior to or on the cutoff date are censored at the last date known alive.
[a] Median OS Follow-up is calculated from the Kaplan-Meier method switching the OS event/censored status, i.e. OS event as censored and censored as OS event

42 Months (95% CIs)				
48 Months (95% CIs)				

Notes: Duration of response is defined as the time in months from first documented response to the date of first documented PD/LoR or death due to any cause, whichever occurs first. Patients without confirmed response are excluded from this analysis. Patients who are still in response at time of data cutoff are censored at their last valid assessment.

Studies: BLU-285-2101 and BLU-285-2202
Starting Dose: < 200 mg, Duration of Response

Notes: Duration of response is defined as the time in months from first documented response to the date of first documented PD/LoR or death due to any cause, whichever occurs first. Patients without confirmed response are excluded from this analysis. Patients who are still in response at time of data cutoff are censored at their last valid assessment.

Abbreviations: CIs=Confidence intervals, CR=Complete remission, CRh=Complete remission with partial recovery of peripheral blood counts, LoR=Loss of response, PD=Progressive disease, PR=Partial remission

Notes: Duration of response is defined as the time in months from first documented response to the date of first documented PD/LoR or death due to any cause, whichever occurs first. Patients without confirmed response are excluded from this analysis. Patients who are still in response at time of data cutoff are censored at their last valid assessment.

Abbreviations: CIs=Confidence intervals, CR=Complete remission, CRh=Complete remission with partial recovery of peripheral blood counts, LoR=Loss of response, PD=Progressive disease, PR=Partial remission

Notes: Duration of response is defined as the time in months from first documented response to the date of first documented PD/LoR or death due to any cause, whichever occurs first. Patients without confirmed response are excluded from this analysis. Patients who are still in response at time of data cutoff are censored at their last valid assessment.

Abbreviations: CIs=Confidence intervals, CR=Complete remission, CRh=Complete remission with partial recovery of peripheral blood counts, LoR=Loss of response, PD=Progressive disease, PR=Partial remission

Notes: Duration of response is defined as the time in months from first documented response to the date of first documented PD/LoR or death due to any cause, whichever occurs first. Patients without confirmed response are excluded from this analysis. Patients who are still in response at time of data cutoff are censored at their last valid assessment.

24 Months (95% CIs)				
30 Months (95% CIs)				
36 Months (95% CIs)				
42 Months (95% CIs)				
48 Months (95% CIs)				

Abbreviations: CIs=Confidence intervals, CR=Complete remission, CRh=Complete remission with partial recovery of peripheral blood counts, LoR=Loss of response, PD=Progressive disease, PR=Partial remission

Notes: Duration of response is defined as the time in months from first documented response to the date of first documented PD/LoR or death due to any cause, whichever occurs first. Patients without confirmed response are excluded from this analysis. Patients who are still in response at time of data cutoff are censored at their last valid assessment.

Notes: Time to response is defined as the time in months from the start of treatment to the time a response (CR/CRh/PR/CI) is first met. Patients without confirmed response are excluded from this analysis. Time to complete remission is defined as the time from the start of treatment to the time a CR/CRh is first met. Patients without confirmed CR/CRh are excluded from this analysis. Time to CR+CRh+PR is defined as the time from the start of treatment to the time a CR/CRh/PR is first met. Patients without confirmed CR/CRh/PR are excluded from this analysis.

Notes: Progression free survival is defined as the time in months from the start of treatment to the date of first documented PD or death due to any cause, whichever occurs first. If a patient has not had an event, progression free survival is censored at the date of last valid assessment that is LoR or better.

Notes: Progression free survival is defined as the time in months from the start of treatment to the date of first documented PD or death due to any cause, whichever occurs first. If a patient has not had an event, progression free survival is censored at the date of last valid assessment that is LoR or better.

Notes: Progression free survival is defined as the time in months from the start of treatment to the date of first documented PD or death due to any cause, whichever occurs first. If a patient has not had an event, progression free survival is censored at the date of last valid assessment that is LoR or better.

Source: Listing 16.3.9.7.1
Abbreviations: CIs=Confidence intervals, LoR=Loss of response, PD=Progressive disease, SD=Stable disease, NE=Not Evaluable
Notes: Progression free survival is defined as the time in months from the start of treatment to the date of first documented PD or death due to any cause, whichever occurs first. If a patient has not had an event, progression free survival is censored at the date of last valid assessment that is LoR or better.

Abbreviations: CIs=Confidence intervals, LoR=Loss of response, PD=Progressive disease, SD=Stable disease, NE=Not Evaluable
Notes: Progression free survival is defined as the time in months from the start of treatment to the date of first documented PD or death due to any cause, whichever occurs first. If a patient has not had an event, progression free survival is censored at the date of last valid assessment that is LoR or better.

Notes: Baseline is defined as the last observation before first dose date of study drug, including pre-dose assessments on the first dose date. In study 2101, if a patient does not have serum tryptase measurement on Cycle 1 Day 1 or earlier, the closest on treatment measurement within 3 days after Day 1 of avapritinib is considered as baseline assessment.

Summary of Serum Tryptase Best Response by Prior Anti-Neoplastic Therapy
Safety Population
BLU-285-2202 & 200 mg Dose Group

Prior antineoplastic therapy = No

Serum Tryptase Best Response	ASM (N=4) n (%)	SM-AHN (N=15) n (%)	MCL (N=1) n (%)	All AdvSM (N=20) n (%)
Patients with baseline serum tryptase assessment	4	15	1	20
Patients achieved serum tryptase < 20 ng/mL (CR)	2 (50.0)	9 (60.0)	0	11 (55.0)
Patients achieved >= 50 % reduction from baseline	3 (75.0)	14 (93.3)	1 (100.0)	18 (90.0)
Patients achieved >= 50 % reduction from baseline for at least 2 cycles (PR)	1 (25.0)	8 (53.3)	0	9 (45.0)
Patients with serum tryptase >= 40 ng/mL	4	14	1	19
Patients achieved serum tryptase < 20 ng/mL (CR)	2 (50.0)	8 (57.1)	0	10 (52.6)
Patients achieved >= 50 % reduction from baseline	3 (75.0)	13 (92.9)	1 (100.0)	17 (89.5)
Patients achieved >= 50 % reduction from baseline for at least 2 cycles (PR)	1 (25.0)	7 (50.0)	0	8 (42.1)

Notes: Baseline is defined as the last observation before first dose date of study drug, including pre-dose assessments on the first dose date. If a patient does not have serum tryptase measurement on Cycle 1 Day 1 or earlier, the closest on treatment measurement within 3 days after Day 1 of avapritinib is considered as baseline assessment.

Notes: Baseline is defined as the last observation before first dose date of study drug, including pre-dose assessments on the first dose date. In study 2101, if a patient does not have Mutation Allele Fraction measurement on Cycle 1 Day 1 or earlier, the closest on treatment measurement within 3 days of Day 1 of avapritinib is considered as baseline assessment.

Summary of KIT D816V Mutation Allele Fraction Percent Change from Baseline in Blood
AdvSM Population with at least one prior antineoplastic therapy
Study: BLU-285-2101

Starting Dose: 200 mg				
D816V Mutation (%) Allele Fraction Percent Change from Baseline	ASM (N=1)	SM-AHN (N=7)	MCL (N=4)	All AdvSM (N=12)
Percent Change from Baseline to Cycle 3 Day 1				
n	0	5	3	8
Mean (StdDev)		-49.2 (28.97)	-60.0 (20.28)	-53.3 (25.07)
Median		-47.0	-49.3	-48.3
Min, Max		-81, -7	-83, -47	-83, -7
Percent Change from Baseline to Cycle 5 Day 1				
n	0	4	3	7
Mean (StdDev)		-29.7 (41.49)	-71.3 (16.40)	-47.5 (38.01)
Median		-29.3	-62.7	-62.6
Min, Max		-68, 8	-90, -61	-90, 8
Percent Change from Baseline to Cycle 7 Day 1				
n	0	3	3	6
Mean (StdDev)		-29.3 (46.77)	-77.4 (14.96)	-53.3 (40.70)
Median		-14.4	-74.1	-69.2
Min, Max		-82, 8	-94, -64	-94, 8
Percent Change from Baseline to Cycle 11 Day 1				
n	0	2	2	4
Mean (StdDev)		-49.3 (63.14)	-86.2 (9.63)	-67.8 (42.57)
Median		-49.3	-86.2	-86.2
Min, Max		-94, -5	-93, -79	-94, -5

Notes: Baseline is defined as the last observation before first dose date of study drug, including pre-dose assessments on the first dose date. In study 2101, if a patient does not have Mutation Allele Fraction measurement on Cycle 1 Day 1 or earlier, the closest on treatment measurement within 3 days of Day 1 of avapritinib is considered as baseline assessment.

Notes: Baseline is defined as the last observation before first dose date of study drug, including pre-dose assessments on the first dose date. In study 2101, if a patient does not have Mutation Allele Fraction measurement on Cycle 1 Day 1 or earlier, the closest on treatment measurement within 3 days of Day 1 of avapritinib is considered as baseline assessment.

Notes: Baseline is defined as the last observation before first dose date of study drug, including pre-dose assessments on the first dose date. In study 2101, if a patient does not have Mutation Allele Fraction measurement on Cycle 1 Day 1 or earlier, the closest on treatment measurement within 3 days of Day 1 of avapritinib is considered as baseline assessment.

>= 50% reduction from baseline for at least 2 cycles	0	2 (50.0)	3 (75.0)	5 (62.5)	0	5 (62.5)

Baseline is defined as the last observation before first dose date of study drug, including pre-dose assessments on the first dose date. If a patient does not have Mutation Allele Fraction measurement on Cycle 1 Day 1 or earlier, the closest on treatment measurement within 3 days of Day 1 of avapritinib is considered as baseline assessment.

Summary of Spleen and Liver Volume
AdvSM Population with at least one prior antineoplastic therapy
Study: BLU-285-2101 and BLU-285-2202

Starting Dose: 400 mg
Organ = Spleen

Volume (mL)	ASM (N=1)	SM-AHN (N=4)	MCL (N=0)	All AdvSM (N=5)
Cycle 36 Day 1				
n	0	1	0	1
Mean (StdDev)		902.61 (-)		902.61 (-)
Median		902.61		902.61
Min, Max		902.6, 902.6		902.6, 902.6

Notes: Baseline is defined as the last observation before first dose date of study drug, including pre-dose assessments on the first dose date. Images by CT or MRI are centrally assessed by independent radiologist.
Program: ../BLU-285/ISE_2101_sNDA/Final/Programs/Prod/Adhoc/GermanyHTA/t-vol-advsm.sas Date: 19:35/27SEP2021
