Source: Listing 16.3.11
Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Source: Listing 16.3.11
Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Source: Listing 16.3.11
Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Source: Listing 16.3.11
Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Source: Listing 16.3.11
Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Source: Listing 16.3.11
Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Source: Listing 16.3.11
Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Source: Listing 16.3.11
Abbreviations: C=Cycle, D=Day, GI=Gastrointestinal, Q=Question, SAF= symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. For example, Baseline score is determined by the 7-day average from C1D-7 to C1D-1; score on C3D1 is determined by the 7-day average from C2D22 to C2D28, so on so forth. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.

Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Abbreviations: C=Cycle, CIs=Confidence intervals, D=Day, GI=Gastrointestinal, Q=Question, SAF=symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Source: Listing 16.3.11
Abbreviations: C=Cycle, CIs=Confidence intervals, D=Day, GI=Gastrointestinal, Q=Question, SAF=symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Abbreviations: C=Cycle, CIs=Confidence intervals, D=Day, GI=Gastrointestinal, Q=Question, SAF=symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Source: Listing 16.3.11
Abbreviations: C=Cycle, CIs=Confidence intervals, D=Day, GI=Gastrointestinal, Q=Question, SAF=symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Abbreviations: C=Cycle, CIs=Confidence intervals, D=Day, GI=Gastrointestinal, Q=Question, SAF=symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Abbreviations: C=Cycle, CIs=Confidence intervals, D=Day, GI=Gastrointestinal, Q=Question, SAF=symptom assessment form, TSS=Total sympotom score
Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Notes: Diagnosis of AdvSM is by RAC (Study 2101) or SSC (Study 2202) adjudication. Skin domain is composed of Q3, Q4, and Q5. GI domain is composed of Q1, Q2, Q8, and Q10. TSS is composed of Q1, Q2, Q3, Q4, Q5, Q6, Q8, and Q10. A symptom/domain/TSS score for any given day is determined by the 7-day average prior to that day. Domain scores and TSS on any given day is only calculated if no symptom score within the domain or the TSS is missing. If a symptom/domain/TSS score is available on at least 4 or more days during the 7-day period (no consecutive requirement), the average score is calculated by the sum of the available scores divided by the number of days with available scores.
[1] Two-sided p-value of paired t test, The null hypothesis is that the mean change from baseline is 0.

Thrombophlebitis	1 (1.9)	1 (1.7)	1 (1.2)

Abbreviations: AdvSM = Advanced Systemic Mastocytosis
Note 1: If a patient experiences more than 1 event within a given System Organ Class or Preferred Term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'All Doses' column.

Abbreviations: AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given System Organ Class or Preferred term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Abbreviations: AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given System Organ Class or Preferred term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Lymphopenia	1 (1.9)	0	0	0	0	1 (1.9)
Mast cell activation syndrome	0	1 (1.9)	0	0	0	1 (1.9)

Abbreviations: AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given System Organ Class or Preferred term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Abbreviations: AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given System Organ Class or Preferred term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Abbreviations: AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given System Organ Class or Preferred term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Abbreviations: AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given System Organ Class or Preferred term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Abbreviations: AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given System Organ Class or Preferred term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Abbreviations: AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given System Organ Class or Preferred term, that patient is counted only once under that System Organ Class or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: System Organ Classes are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Abbreviations: AESI=Adverse Event of Special Interest; AdvSM = Advanced Systemic Mastocytosis; NCI CTCAE = National Cancer Institute Common Terminology Criteria for Adverse Events
Note 1: In each treatment group, if a patient experiences more than 1 event within a given AESI category or Preferred Term, that patient is counted only once at the highest grade under that AESI category or Preferred Term, respectively.
Note 2: Percentages are based on the number of patients in the Safety Population in each column and treatment group.
Note 3: AESI Categories are sorted alphabetically and Preferred Terms are subsequently sorted in decreasing order of frequency using the 'Any Grade' column.

Kaplan-Meier Curves of Investigator Assessed Duration of Response
RAC-RE Population with at least one prior antineoplastic therapy - Responders (CR+CRh+PR+CI)
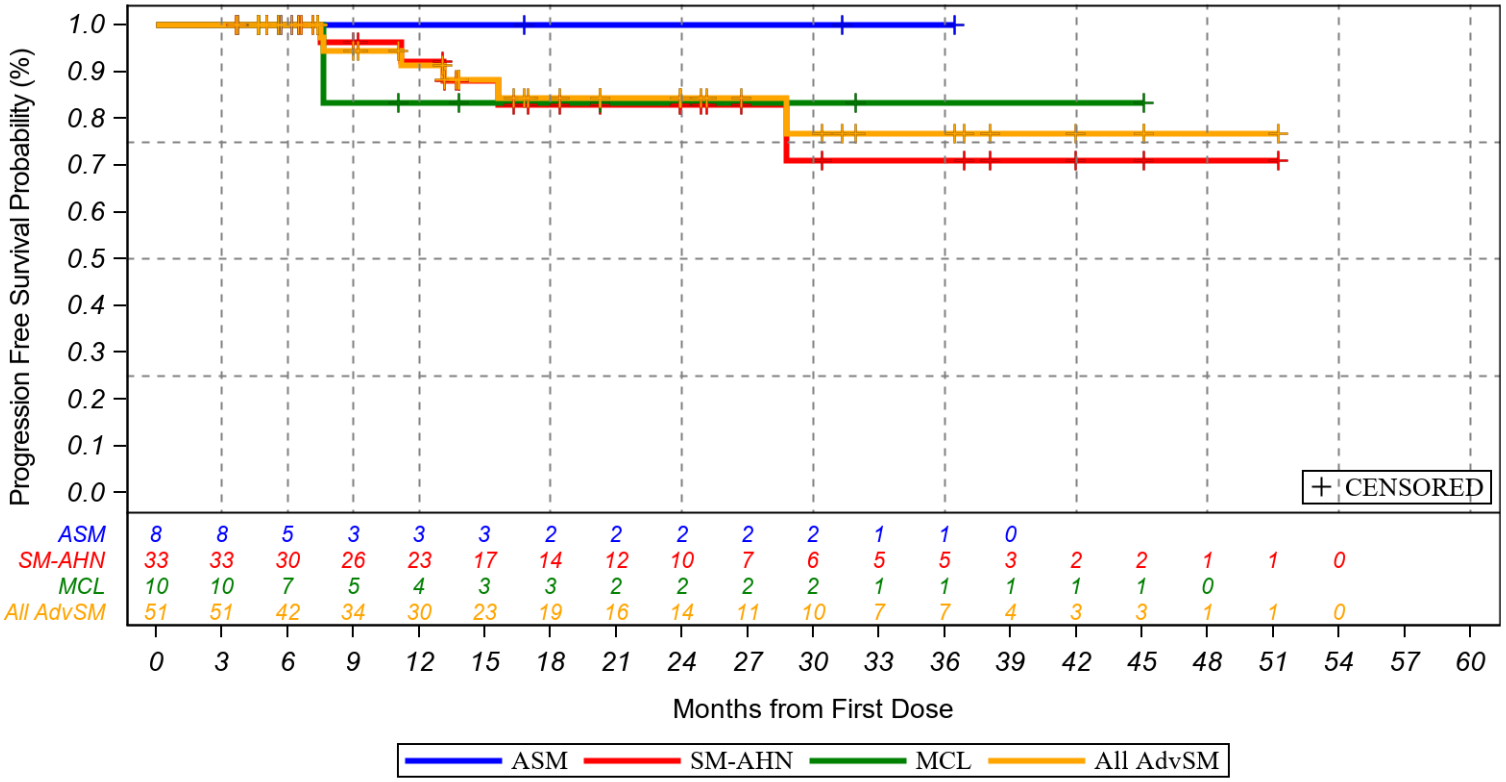
Studies: BLU-285-2101 and BLU-285-2202
Starting Dose: Overall, Duration of Response



Notes: Duration of response is defined as the time in months from first documented response to the date of first documented PD/LoR or death due to any cause, whichever occurs first. Patients without confirmed response are excluded from this analysis. Patients who are still in response at time of data cutoff are censored at their last valid assessment.
