Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

		P-value of Subgroup*Treatment Interaction [d]			0.1650

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Gilead Sciences, Inc.
Study IMMU-132-09

Table 15.11.2.1.1: Time to the First Treatment-Emergent Adverse Event (TEAE)
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Patients With Events (%)	201 (100.0%)	185 (95.4%)	
Patients Without Events (Censored) (%)	0	9 (4.6%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.1 (0.1, 0.1)	0.2 (0.1, 0.2)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.530 (1.243, 1.883)
p-value			<0.0001

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
Time to event is the time (months) from the 1st dose date to the event date or 30 days after treatment, death date, or last contact, which is earlier
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.6.1: Time to the First TEAE Excluding Disease-Related Events
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Patients With Events (%)	201 (100.0%)	185 (95.4%)	
Patients Without Events (Censored) (%)	0	9 (4.6%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.1 (0.1, 0.1)	0.2 (0.1, 0.2)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.530 (1.243, 1.883)
p-value			<0.0001

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
Time to event is the time (months) from the 1st dose date to the event date or 30 days after treatment, death date, or last contact, which is earlier
Disease-related events are Cancer pain, Tumour pain, Malignant pleural effusion and Metastases to skin in SOC Neoplasms benign, malignant and unspecified (incl cysts and polyps).
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Table 15.11.4.3: Time to the First Serious Treatment-Emergent Adverse Event (TEAE) of Special Interest
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Overall			
Patients With Events (%)	35 (17.4%)	20 (10.3%)	
Patients Without Events (Censored) (%)	166 (82.6%)	174 (89.7%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.573 (0.903, 2.738)
p-value			0.1073

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
Time to event is the time (months) from the 1st dose date to the event date or 30 days after treatment, death date, or last contact, which is earlier
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
The analysis is based on Interim 2 data cut at 7/1/2022.

	SG (N=201)	TPC (N=194)	Treatment Comparison
Overall			
Patients With Events (%)	125 (62.2%)	86 (44.3%)	
Patients Without Events (Censored) (%)	76 (37.8%)	108 (55.7%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	1.1 (0.9, 2.3)	5.8 (2.8, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.568 (1.190, 2.066)
p-value			0.0013

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
Time to event is the time (months) from the 1st dose date to the event date or 30 days after treatment, death date, or last contact, which is earlier
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The analysis is based on Interim 2 data cut at 7/1/2022.

Gilead Sciences, Inc.
Study IMMU-132-09

Table 15.11.7.1: Time to the First Frequent TEAE by SOC and PT
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TEAE SOC - Blood and lymphatic system disorders			
Patients With Events (%)	165 (82.1%)	118 (60.8%)	
Patients Without Events (Censored) (%)	36 (17.9%)	76 (39.2%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.7 (0.6, 0.7)	1.7 (0.7, 2.4)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.690 (1.328, 2.152)
p-value			<0.0001

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

p-value			0.9016

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Frequent TEAE - Dry mouth			
Patients With Events (%)	13 (6.5%)	5 (2.6%)	
Patients Without Events (Censored) (%)	188 (93.5%)	189 (97.4%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (20.3, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.019 (0.708, 5.754)
p-value			0.1798

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.7.1: Time to the First Frequent TEAE by SOC and PT
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TEAE SOC - Infections and infestations			
Patients With Events (%)	76 (37.8%)	55 (28.4%)	
Patients Without Events (Censored) (%)	125 (62.2%)	139 (71.6%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	9.4 (6.4, 15.8)	NE (6.5, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.139 (0.802, 1.619)
p-value			0.4680

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Hazard Ratio (95% CI)			2.644 (1.182, 5.916)
p-value			0.0139

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Patients With Events (%)	9 (4.5%)	18 (9.3%)	
Patients Without Events (Censored) (%)	192 (95.5%)	176 (90.7%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			0.364 (0.161, 0.821)
p-value			0.0114

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.7.1: Time to the First Frequent TEAE by SOC and PT
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TEAE - Dry skin			
Patients With Events (%)	13 (6.5%)	8 (4.1%)	
Patients Without Events (Censored) (%)	188 (93.5%)	186 (95.9%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.188 (0.487, 2.902)
p-value			0.7047

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Table 15.11.7.5: Time to the First Frequent Serious TEAE by Selected SOC and PT
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TESAE SOC - Blood and lymphatic system disorders			
Patients With Events (%)	15 (7.5%)	12 (6.2%)	
Patients Without Events (Censored) (%)	186 (92.5%)	182 (93.8%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.212 (0.567, 2.592)
p-value			0.6203

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
NE = not estimable.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Table 15.11.7.3: Time to the First Grade 3 or Higher Frequent TEAE by SOC and PT
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TEAE - Fatigue			
Patients With Events (%)	12 (6.0%)	6 (3.1%)	
Patients Without Events (Censored) (%)	189 (94.0%)	188 (96.9%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.822 (0.683, 4.860)
p-value			0.2237

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Hazard ratio and CI are from the stratified Cox regression analysis. P-value is from the stratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
The analysis is based on Interim 2 data cut at 7/1/2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Table 15.11.8: TEAE Leading to Study Drug Discontinuation by SOC and PT
Safety Population
Excluding participants pre-selected to Gemcitabine

System Organ Class Preferred Term	SG (N=201)	TPC (N=194)	Total (N=395)
Subjects with Any Treatment-Emergent Adverse Events Leading to Study Drug Discontinuation	14 (7.0%)	6 (3.1%)	20 (5.1%)
Blood and lymphatic system disorders	3 (1.5%)	1 (0.5%)	4 (1.0%)
Neutropenia	2 (1.0%)	0	2 (0.5%)
Anaemia	1 (0.5%)	0	1 (0.3%)
Leukopenia	1 (0.5%)	0	1 (0.3%)
Thrombocytopenia	0	1 (0.5%)	1 (0.3%)
Gastrointestinal disorders	3 (1.5%)	0	3 (0.8%)
Abdominal pain	1 (0.5%)	0	1 (0.3%)
Colitis	1 (0.5%)	0	1 (0.3%)
Neutropenic colitis	1 (0.5%)	0	1 (0.3%)
General disorders and administration site conditions	3 (1.5%)	0	3 (0.8%)
Asthenia	2 (1.0%)	0	2 (0.5%)
General physical health deterioration	1 (0.5%)	0	1 (0.3%)
Hepatobiliary disorders	1 (0.5%)	1 (0.5%)	2 (0.5%)
Hyperbilirubinaemia	1 (0.5%)	1 (0.5%)	2 (0.5%)
Infections and infestations	3 (1.5%)	1 (0.5%)	4 (1.0%)
Pneumonia	1 (0.5%)	1 (0.5%)	2 (0.5%)
COVID-19 pneumonia	1 (0.5%)	0	1 (0.3%)
Diverticulitis	1 (0.5%)	0	1 (0.3%)

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
Multiple AEs are counted only once per subejct for each SOC/PT. MedDRA Version 25.0 were used for coding.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Gilead Sciences, Inc.
Study IMMU-132-09

Table 15.11.2.1.2: Time to the First Treatment-Emergent Adverse Event (TEAE) by Subgroup
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Interaction p-value			0.9352
Stratification factor of prior chemotherapy regimens for treatment of metastatic disease: 2			
Total Patients	95	92	
Patients (%) With Events	95 (100.0%)	89 (96.7%)	
Patients (%) Without Events (Censored)	0	3 (3.3%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.1 (0.1, 0.2)	0.2 (0.1, 0.3)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.537 (1.142, 2.070)
p-value			0.0047
Stratification factor of prior chemotherapy regimens for treatment of metastatic disease: 3-4			
Total Patients	106	102	
Patients (%) With Events	106 (100.0%)	96 (94.1%)	
Patients (%) Without Events (Censored)	0	6 (5.9%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.1 (0.1, 0.1)	0.2 (0.1, 0.2)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.545 (1.163, 2.053)
p-value			0.0031

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.172 (0.700, 1.964)
p-value			0.5445
Age group: >= 65 years			
Total Patients	46	47	
Patients (%) With Events	20 (43.5%)	9 (19.1%)	
Patients (%) Without Events (Censored)	26 (56.5%)	38 (80.9%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	17.9 (2.7, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.382 (1.082, 5.241)
p-value			0.0261

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Patients (%) With Events	13 (32.5%)	6 (23.1%)	
Patients (%) Without Events (Censored)	27 (67.5%)	20 (76.9%)	

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Age group: < 65 years			
Total Patients	155	147	
Patients (%) With Events	5 (3.2%)	4 (2.7%)	
Patients (%) Without Events (Censored)	150 (96.8%)	143 (97.3%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.106 (0.297, 4.128)
p-value			0.8800
Age group: >= 65 years			
Total Patients	46	47	
Patients (%) With Events	9 (19.6%)	2 (4.3%)	
Patients (%) Without Events (Censored)	37 (80.4%)	45 (95.7%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (7.2, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			3.963 (0.853, 18.413)
p-value			0.0579

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Patients (%) Without Events (Censored)	38 (95.0%)	26 (100.0%)	

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Median (95% CI)	0.3 (0.0, 0.3)	0.5 (0.3, 0.8)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.599 (1.166, 5.796)
p-value			0.0194

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.236 (0.696, 2.196)
p-value			0.4722

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Median (95% CI)	0.5 (0.3, 0.7)	2.4 (0.8, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.249 (1.493, 3.390)
p-value			<0.0001

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Investigators' Choice of Chemotherapy: Vinorelbine			
Total Patients	54	51	

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.4.2: Time to the First Treatment-Emergent Adverse Event (TEAE) of Special Interest by Subgroup
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Overall			
Interaction p-value			0.4438
Early relapse: Yes			
Total Patients	13	14	
Patients (%) With Events	12 (92.3%)	11 (78.6%)	
Patients (%) Without Events (Censored)	1 (7.7%)	3 (21.4%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.4 (0.2, 0.7)	0.5 (0.3, 0.8)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.188 (0.513, 2.750)
p-value			0.7238
Early relapse: No			
Total Patients	181	176	
Patients (%) With Events	168 (92.8%)	142 (80.7%)	
Patients (%) Without Events (Censored)	13 (7.2%)	34 (19.3%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.3 (0.3, 0.4)	0.6 (0.5, 0.7)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.574 (1.256, 1.972)
p-value			<0.0001

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Median (95% CI)	NE (10.2, NE)	6.2 (3.7, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			0.490 (0.260, 0.923)
p-value			0.0245

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.074 (0.390, 2.963)
p-value			0.8886

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.4.4: Time to the First Serious Treatment-Emergent Adverse Event (TEAE) of Special Interest by Subgroup
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Infections			
Interaction p-value			0.9079
Screening ECOG Status: 0			
Total Patients	87	90	
Patients (%) With Events	7 (8.0%)	3 (3.3%)	
Patients (%) Without Events (Censored)	80 (92.0%)	87 (96.7%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.208 (0.569, 8.567)
p-value			0.2404
Screening ECOG Status: 1			
Total Patients	114	104	
Patients (%) With Events	12 (10.5%)	5 (4.8%)	
Patients (%) Without Events (Censored)	102 (89.5%)	99 (95.2%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.820 (0.637, 5.203)
p-value			0.2566

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.4.4: Time to the First Serious Treatment-Emergent Adverse Event (TEAE) of Special Interest by Subgroup
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Patients (%) With Events	8 (14.8%)	5 (9.8%)	
Patients (%) Without Events (Censored)	46 (85.2%)	46 (90.2%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (12.4, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.117 (0.352, 3.544)
p-value			0.8532

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Hazard Ratio (95% CI)			1.137 (0.509, 2.538)
p-value			0.7536

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Patients (%) Without Events (Censored)	31 (77.5%)	22 (84.6%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (12.4, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.438 (0.442, 4.674)
p-value			0.5457

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.4.6: Time to the First Grade 3 or Higher TEAE of Special Interest by Subgroup
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Neutropenia+			
Interaction p-value			0.1157
Stratification factor of endocrine therapy in the metastatic setting for >=6 months: Yes			
Total Patients	180	171	
Patients (%) With Events	104 (57.8%)	67 (39.2%)	
Patients (%) Without Events (Censored)	76 (42.2%)	104 (60.8%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	1.3 (0.9, 3.7)	9.6 (6.0, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.642 (1.208, 2.233)
p-value			0.0015
Stratification factor of endocrine therapy in the metastatic setting for >=6 months: No			
Total Patients	21	23	
Patients (%) With Events	7 (33.3%)	10 (43.5%)	
Patients (%) Without Events (Censored)	14 (66.7%)	13 (56.5%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (0.7, NE)	2.4 (0.7, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			0.700 (0.265, 1.851)
p-value			0.4682

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			NE (NE, NE)
p-value			NE

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.4.6: Time to the First Grade 3 or Higher TEAE of Special Interest by Subgroup
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Infections			
Interaction p-value			0.1063
Geographic Region: Europe			
Total Patients	123	121	
Patients (%) With Events	14 (11.4%)	3 (2.5%)	
Patients (%) Without Events (Censored)	109 (88.6%)	118 (97.5%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (16.1, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			4.228 (1.211, 14.760)
p-value			0.0140
Geographic Region: North America			
Total Patients	78	73	
Patients (%) With Events	7 (9.0%)	5 (6.8%)	
Patients (%) Without Events (Censored)	71 (91.0%)	68 (93.2%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			0.983 (0.308, 3.137)
p-value			0.9776

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.4.6: Time to the First Grade 3 or Higher TEAE of Special Interest by Subgroup
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Patients (%) With Events	3 (5.6%)	1 (2.0%)	
Patients (%) Without Events (Censored)	51 (94.4%)	50 (98.0%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.303 (0.237, 22.397)
p-value			0.4599

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Median (95% CI)	NE (6.5, NE)	4.6 (4.6, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			NE (NE, NE)
p-value			0.0368
Early relapse: No			
Total Patients	181	176	
Patients (%) With Events	5 (2.8%)	5 (2.8%)	
Patients (%) Without Events (Censored)	176 (97.2%)	171 (97.2%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			0.818 (0.235, 2.841)
p-value			0.7509

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

	SG (N=201)	TPC (N=194)	Treatment Comparison
Febrile neutropenia			
Interaction p-value			0.6265
Chemotherapy in neo/adjuvant setting: Yes			
Total Patients	122	129	
Patients (%) With Events	7 (5.7%)	8 (6.2%)	
Patients (%) Without Events (Censored)	115 (94.3%)	121 (93.8%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			0.881 (0.319, 2.429)
p-value			0.8060
Chemotherapy in neo/adjuvant setting: No			
Total Patients	79	65	
Patients (%) With Events	5 (6.3%)	3 (4.6%)	
Patients (%) Without Events (Censored)	74 (93.7%)	62 (95.4%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.363 (0.326, 5.705)
p-value			0.6708

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.
The subgroup is kept if the number of total patients in of all categories over total (SG+TPC) is no less than 10.
The subgroup is kept if at least one category has no less than 10 patients with events in total (SG and TPC).
The analysis is based on Interim 2 data cut at 7/1/2022.

Table 15.11.7.2.1: Time to the First Frequent TEAE by SOC, PT and Subgroup: Prior Chemotherapy for Treatment of Metastatic Disease
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TEAE SOC - Blood and lymphatic system disorders			
Interaction p-value			0.2874
Stratification factor of prior chemotherapy regimens for treatment of metastatic disease: 2			
Total Patients	95	92	
Patients (%) With Events	79 (83.2%)	52 (56.5%)	
Patients (%) Without Events (Censored)	16 (16.8%)	40 (43.5%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.7 (0.5, 0.7)	2.1 (1.0, 4.4)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.899 (1.334, 2.704)
p-value			0.0003
Stratification factor of prior chemotherapy regimens for treatment of metastatic disease: 3-4			
Total Patients	106	102	
Patients (%) With Events	86 (81.1%)	66 (64.7%)	
Patients (%) Without Events (Censored)	20 (18.9%)	36 (35.3%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.7 (0.6, 0.7)	0.8 (0.7, 2.1)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.489 (1.076, 2.061)
p-value			0.0178

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			NE (NE, NE)
p-value			0.0059

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Median (95% CI)	NE (NE, NE)	NE (1.2, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			NE (NE, NE)
p-value			0.2888

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Patients (%) With Events	4 (2.1%)	13 (7.0%)	
Patients (%) Without Events (Censored)	188 (97.9%)	173 (93.0%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			0.227 (0.073, 0.712)
p-value			0.0058
Stratification factor of visceral metastasis: No			
Total Patients	9	8	
Patients (%) With Events	0	1 (12.5%)	
Patients (%) Without Events (Censored)	9 (100.0%)	7 (87.5%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (3.0, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			NE (NE, NE)
p-value			0.1266

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Patients (%) With Events	8 (38.1%)	1 (4.3%)	
Patients (%) Without Events (Censored)	13 (61.9%)	22 (95.7%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (0.5, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			10.704 (1.333, 85.942)
p-value			0.0055

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Median (95% CI)	23.0 (16.1, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.263 (0.474, 3.365)
p-value			0.6374

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Table 15.11.7.2.4: Time to the First Frequent TEAE by SOC, PT and Subgroup: Age group
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TEAE - Alopecia			
Interaction p-value			0.1839
Age group: < 65 years			
Total Patients	155	147	
Patients (%) With Events	78 (50.3%)	30 (20.4%)	
Patients (%) Without Events (Censored)	77 (49.7%)	117 (79.6%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	2.1 (0.9, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			3.020 (1.981, 4.604)
p-value			<0.0001
Age group: >= 65 years			
Total Patients	46	47	
Patients (%) With Events	20 (43.5%)	15 (31.9%)	
Patients (%) Without Events (Censored)	26 (56.5%)	32 (68.1%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (0.7, NE)	NE (2.8, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.639 (0.836, 3.211)
p-value			0.1433

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

p-value			0.2223

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Median (95% CI)	1.9 (0.7, 10.6)	5.5 (3.0, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.525 (1.026, 2.266)
p-value			0.0367

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.152 (1.340, 3.454)
p-value			0.0011

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Hazard Ratio (95% CI)			1.452 (0.930, 2.269)
p-value			0.1024

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Prior CDK treatment duration: <= 12 months			
Total Patients	116	119	
Patients (%) With Events	66 (56.9%)	45 (37.8%)	
Patients (%) Without Events (Censored)	50 (43.1%)	74 (62.2%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	1.0 (0.3, 8.2)	7.6 (3.9, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.715 (1.172, 2.508)
p-value			0.0048
Prior CDK treatment duration: > 12 months			
Total Patients	80	73	
Patients (%) With Events	50 (62.5%)	18 (24.7%)	
Patients (%) Without Events (Censored)	30 (37.5%)	55 (75.3%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	1.3 (0.9, 3.7)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			3.199 (1.864, 5.492)
p-value			<0.0001

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Hazard Ratio (95% CI)			1.738 (0.318, 9.492)
p-value			0.5181

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.237 (1.621, 3.089)
p-value			<0.0001

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Patients (%) Without Events (Censored)	74 (40.9%)	105 (59.7%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	1.0 (0.7, 2.1)	5.7 (3.5, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.835 (1.358, 2.479)
p-value			<0.0001

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Table 15.11.7.2.10: Time to the First Frequent TEAE by SOC, PT and Subgroup: Baseline Documented Tartget vs Non-Target Liver Lesions
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TEAE - Nausea			
Interaction p-value			0.9991
Baseline documented Target or Non-target liver lesions per RECIST1.1 per Local Investigator Review (LIR): Yes			
Total Patients	177	171	
Patients (%) With Events	105 (59.3%)	56 (32.7%)	
Patients (%) Without Events (Censored)	72 (40.7%)	115 (67.3%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	1.1 (0.8, 3.5)	NE (7.6, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.168 (1.566, 3.003)
p-value			<0.0001
Baseline documented Target or Non-target liver lesions per RECIST1.1 per Local Investigator Review (LIR): No			
Total Patients	24	23	
Patients (%) With Events	15 (62.5%)	8 (34.8%)	
Patients (%) Without Events (Censored)	9 (37.5%)	15 (65.2%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	0.8 (0.3, NE)	NE (0.5, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.174 (0.921, 5.134)
p-value			0.0630

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Hazard Ratio (95% CI)			NE (NE, NE)
p-value			0.2112

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	10.5 (3.4, NE)	NE (8.0, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.532 (0.871, 2.697)
p-value			0.1347

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Hazard Ratio (95% CI)			1.376 (0.882, 2.145)
p-value			0.1515
Trop2: H-Score > 200			
Total Patients	40	26	

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

p-value			0.1743

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Hazard Ratio (95% CI)			0.633 (0.305, 1.315)
p-value			0.2167

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

p-value			0.0355
Investigators' Choice of Chemotherapy: Vinorelbine			
Total Patients	54	51	

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

p-value			0.8139
Investigators' Choice of Chemotherapy: Vinorelbine			
Total Patients	54	51	

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients in at least one treatment arm is no less than 10.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Table 15.11.7.6.1: Time to the First Frequent Serious TEAE by Selected SOC, PT and Prior Chemotherapy for Treatment of Metastatic Disease
Safety Population
Excluding participants pre-selected to Gemcitabine

	SG (N=201)	TPC (N=194)	Treatment Comparison
Frequent TESAE SOC - Gastrointestinal disorders			
Interaction p-value			0.5290
Stratification factor of prior chemotherapy regimens for treatment of metastatic disease: 2			
Total Patients	95	92	
Patients (%) With Events	10 (10.5%)	2 (2.2%)	
Patients (%) Without Events (Censored)	85 (89.5%)	90 (97.8%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			4.721 (1.034, 21.556)
p-value			0.0273
Stratification factor of prior chemotherapy regimens for treatment of metastatic disease: 3-4			
Total Patients	106	102	
Patients (%) With Events	11 (10.4%)	4 (3.9%)	
Patients (%) Without Events (Censored)	95 (89.6%)	98 (96.1%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	NE (NE, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			2.551 (0.811, 8.022)
p-value			0.0969

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
NE = not estimable. The SOC/PT is kept if the stratified log-rank test for treatment comparison is significant.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Hazard Ratio (95% CI)			5.265 (0.634, 43.719)
p-value			0.0852

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
NE = not estimable. The SOC/PT is kept if the stratified log-rank test for treatment comparison is significant.
Treatment-emergent adverse events are defined as any AEs that started on or after the first dose date and up to 30 days after the last dose date.
The following terms are mapped: Neutrophil count decreased->Neutropenia, White blood cell count decreased->Leukopenia, Lymphocyte count decreased ->Lymphopenia, Haemoglobin decreased->Anaemia, Red blood cell count decreased->Anaemia, Platelet count decreased->Thrombocytopenia
The analysis is based on Interim 2 data cut at 7/1/2022.

Patients (%) Without Events (Censored)	54 (50.9%)	55 (53.9%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	4.6 (1.0, NE)	8.3 (2.1, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.077 (0.726, 1.599)
p-value			0.7423

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Median (95% CI)	NE (6.5, NE)	NE (NE, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			NE (NE, NE)
p-value			0.4142

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Analysis SG vs. TPC			
Hazard Ratio (95% CI)			0.665 (0.268, 1.645)
p-value			0.3750

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Total Patients	116	119	
Patients (%) With Events	57 (49.1%)	45 (37.8%)	
Patients (%) Without Events (Censored)	59 (50.9%)	74 (62.2%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	3.8 (1.2, NE)	9.6 (4.3, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.286 (0.870, 1.903)
p-value			0.1965
Prior CDK treatment duration: > 12 months			
Total Patients	80	73	
Patients (%) With Events	45 (56.3%)	30 (41.1%)	
Patients (%) Without Events (Censored)	35 (43.8%)	43 (58.9%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	1.1 (0.7, NE)	NE (2.8, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.625 (1.023, 2.580)
p-value			0.0434

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Hazard Ratio (95% CI)			5.479 (1.604, 18.711)
p-value			0.0023

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Hazard Ratio (95% CI)			1.535 (1.066, 2.211)
p-value			0.0205
Chemotherapy in neo/adjuvant setting: No			
Total Patients	79	65	
Patients (%) With Events	48 (60.8%)	32 (49.2%)	
Patients (%) Without Events (Censored)	31 (39.2%)	33 (50.8%)	
Kaplan-Meier Quartiles of Time to Event (months)			
Median (95% CI)	1.3 (0.7, 3.5)	8.3 (1.4, NE)	
Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.308 (0.836, 2.047)
p-value			0.2413

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Trop2: H-Score > 200			
Total Patients	40	26	

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Analysis SG vs. TPC			
Hazard Ratio (95% CI)			1.068 (0.616, 1.853)
p-value			0.8397

The denominator is the number of patients in the Safety Population excluding pre-selected to Gemcitabine for each treatment group per subgroup.
The SOC/PT is kept if the number of patients of is no less than 10 or the incidence is no less than 5% in at least one treatment arm.
Stratified log rank test is performed for treatment comparison in each SOC/PT, which is only be kept when the test is significant.
The SOC/PT in the subgroup will be kept if at least one category of the subgroup has no less than 10 patients with events in total (SG + TPC).
Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Median event time is from Kaplan-Meier estimate and its 95% CI is from Brookmeyer-Crowley method. NE = Not Estimable.

Safety Population
Excluding participants pre-selected to Gemcitabine

The analysis is based on Interim 2 data cut at 01Jul2022.
NE = not estimable.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022
