Dokumentvorlage, Version vom 16.12.2021

Dossier zur Nutzenbewertung gemäß § 35a SGB V

Sacituzumab govitecan (Trodelvy®)

Gilead Sciences GmbH

Anhang 4-G

Monotherapie zur Behandlung von erwachsenen Patienten mit nicht resezierbarem oder metastasiertem Hormonrezeptor (HR)-positivem, HER2-negativem Mammakarzinom, die eine Endokrin-basierte Therapie und mindestens zwei zusätzliche systemische Therapien bei fortgeschrittener Erkrankung erhalten haben

Medizinischer Nutzen und medizinischer Zusatznutzen, Patientengruppen mit therapeutisch bedeutsamem Zusatznutzen

Stand: 14.08.2023

Anhang 4-G 1: Baseline-Charakteristika

Gilead Sciences, Inc.
Study IMMU-132-09

Table 15.1.1.1: participant Disposition
Screened Population
Excluding Participants Pre-selected to Gemcitabine

	SG n (%)	TPC n (%)	Total n (%)
Subjects Screened			651
Subjects Randomized (ITT Population)	205	213	418
Subjects Randomized but not Treated	4 (2.0%)	19 (8.9%)	23 (5.5%)
Received at Least One Dose of Study Treatment (Safety Population)	201 (98.0%)	194 (91.1%)	395 (94.5%)
Treatment Status			
Continuing on Treatment	7 (3.4%)	2 (0.9%)	9 (2.2%)
Discontinued from Study Treatment	194 (94.6%)	192 (90.1%)	386 (92.3%)
Primary Reason for Discontinuing Treatment			
Progressive Disease	162 (79.0%)	160 (75.1%)	322 (77.0%)
Clinical Progression	13 (6.3%)	11 (5.2%)	24 (5.7%)
Radiological Progression	149 (72.7%)	149 (70.0%)	298 (71.3%)
Protocol Deviation (Non-Compliance)	1 (0.5%)	3 (1.4%)	4 (1.0%)
Death	2 (1.0%)	2 (0.9%)	4 (1.0%)
Treatment Delay > 3 Weeks	3 (1.5%)	1 (0.5%)	4 (1.0%)
Withdrawal of Consent	8 (3.9%)	14 (6.6%)	22 (5.3%)
Treatment Only	6 (2.9%)	7 (3.3%)	13 (3.1%)
Survival Follow-up	2 (1.0%)	7 (3.3%)	9 (2.2%)
Adverse Event	14 (6.8%)	6 (2.8%)	20 (4.8%)
Pregnancy	0	0	0
Lost to Follow-Up	0	0	0
Covid-19	0	1 (0.5%)	1 (0.2%)
Study Drug Not Administered (After Randomization)	0	0	0
Other	4 (2.0%)	5 (2.3%)	9 (2.2%)

The denominator is the number of patients in the ITT Population excluding participants assigned to Gemcitabine before randomized for each treatment group.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Table 15.2.2.8: Follow-up Duration of Overall Survival (OS) at Final OS Data
ITT Population
Excluding Participants Pre-selected to Gemcitabine

	SG (N=205)	TPC (N=213)
Number of Deaths [n (%)]	165 (80.5%)	176 (82.6%)
Number of Subjects Alive [n (%)]	40 (19.5%)	37 (17.4%)
Follow-up Duration of OS (months)		
N	205	213
Mean (SD)	15.17 (8.837)	13.41 (9.048)
Median	13.93	10.78
Q1, Q3	8.90, 20.93	5.68, 20.67
Min, Max	0.03, 36.47	0.03, 38.05

The denominator is the number of patients in the ITT Population excluding those assigned to Gemcitabine before randomized for each treatment group.
OS is defined as the number of months (30.4375 days) from date of randomization to the date of death from any cause.
For patients who are still alive, the last known alive date were used in the descriptive summary statistics.
For min and max, + indicated participants are censored at last known alive date.
Final OS data cut is at 01Dec2022.

Follow-up Duration of OS (months)		
N	4	19
Mean (SD)	5.92 (6.593)	7.90 (7.469)
Median	5.27	6.37
Q1, Q3	0.33, 11.52	1.45, 10.35
Min, Max	0.03, 13.11	0.03, 28.52

The denominator is the number of patients in the ITT Population but never dosed excluding participants assigned to Gemcitabine before randomized for each treatment group.
OS is defined as the number of months (30.4375 days) from date of randomization to the date of death from any cause.
For patients who are still alive, the last known alive date were used in the descriptive summary statistics.
For min and max, + indicated participants are censored at last known alive date.
Final OS data cut is at 01Dec2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Table 15.2.1.5: Follow-up Duration of Progression Free Survival (PFS) per BICR for Interim Analysis 2 Data
ITT Population
Excluding Participants Pre-selected to Gemcitabine

	SG (N=205)	TPC (N=213)
Number of Subjects with Disease Progression or Death [n (%)]	135 (65.9%)	142 (66.7%)
Number of Subjects Censored [n (%)]	70 (34.1%)	71 (33.3%)
Follow-up Duration of PFS (months)		
N	205	213
Mean (SD)	5.02 (4.875)	3.44 (3.230)
Median	3.71	2.60
Q1, Q3	1.48, 7.00	1.28, 5.36
Min, Max	0.03, 29.08	0.03, 16.59

PFS is defined as the number of months (30.4375 days) from the date of randomization to the date of the first radiological disease progression per RECIST 1.1 or death due to any cause, whichever comes first. Interim Analysis 2 has data cut at 7/1/2022.
Participants who are still alive by the data cut date without documented disease progression will be censored at their last evaluable tumor assessment
Follow-up duration of PFS is the number of months from randomization date to the death date or disease progression date, which comes first, or date of being censored, if no PFS event.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Table 15.15.1.1.2
Summary of Follow-up Duration for EORTC QLQ-C30
EORTC QLQ-C30 Evaluable Population
Excluding Subjects for whom Gemcitabine was selected as TPC Prior to Randomization

Statistic	SG (N=174)	TPC (N=165)	Overall (N=339)
N	174	165	339
Mean (SD)	6.8 (5.65)	4.7 (3.81)	5.8 (4.94)
95% CI	5.9, 7.6	4.1, 5.3	5.3, 6.3
Median	5.4	3.7	4.3
Q1, Q3	2.6, 8.3	1.8, 6.5	2.1, 7.6
Min, Max	0.0, 30.4	0.3, 22.9	0.0, 30.4

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. Follow-up duration is defined as time from start of treatment until final study visit (or date of last questionnaire completion if occurred earlier) in months (days/30.4375). CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 15.15.1.2.2
Summary of Follow-up Duration for EQ-5D VAS
EQ-5D-5L Evaluable Population
Excluding Subjects for whom Gemcitabine was selected as TPC Prior to Randomization

Statistic	SG (N=175)	TPC (N=164)	Overall (N=339)
N	175	163	338
Mean (SD)	6.6 (5.63)	4.8 (3.82)	5.7 (4.93)
95% CI	5.8, 7.5	4.2, 5.4	5.2, 6.3
Median	5.0	3.9	4.3
Q1, Q3	2.6, 8.2	1.8, 6.7	2.1, 7.6
Min, Max	0.0, 30.4	-0.1, 22.9	-0.1, 30.4

Note: "EQ-5D-5L Evaluable population" is defined as ITT subjects who completed at least one of the 5 dimensions or VAS score at baseline and at least one evaluable assessment at post-baseline visits based on EQ-5D-5L. Follow-up duration is defined as time from start of treatment until final study visit (or date of last questionnaire completion if occurred earlier) in months (days/30.4375). CI = Confidence Interval; EQ-5D-5L = EuroQoL Five Dimensions, Five Levels questionnaire; SD = Standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = visual analog scale

Table 15.15.1.3.2
Summary of Follow-up Duration for PRO-CTCAE
Safety Population
Excluding Subjects for whom Gemcitabine was selected as TPC Prior to Randomization

Statistic	SG (N=201)	TPC (N=194)	Overall (N=395)
N	197	191	388
Mean (SD)	6.4 (5.58)	4.2 (3.84)	5.3 (4.92)
95% CI	5.6, 7.2	3.7, 4.8	4.8, 5.8
Median	5.0	3.1	4.2
Q1, Q3	2.1, 8.1	1.4, 5.9	1.6, 7.3
Min, Max	-0.8, 30.4	-0.2, 22.9	-0.8, 30.4

Note:"Safety population" is defined as all ITT subjects who have received at least one dose of study drug. Follow-up duration is defined as time from start of treatment until final study visit (or date of last questionnaire completion if occurred earlier) in months (days/30.4375). CI = Confidence Interval; SD = standard deviation; SG = Sacituzumab Govitecan; PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; TPC = Treatment Physician Choice.

Median OS (months) [b]	13.5	10.1	
95% CI	(11.8, 15.4)	(8.3, 12.4)	
Hazard Ratio (Relative to TPC) [c]			0.804
95% CI for Hazard Ratio			(0.601, 1.076)
p-value			0.1416

The denominator is the number of patients in the ITT excluding those pre-assigned to Gemcitabine for each treatment arm per category in each subgroup.
OS is defined as the number of months (30.4375 days) from date of randomization to the date of death from any cause.
Patients without documentation of death are censored on the date they were last known to be alive.
[a] Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
[b] Median OS is from Kaplan-Meier estimate. CI for median is computed using the Brookmeyer-Crowley method. NE = Not Estimable.
[c] Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.
Final OS data cut is at 12/1/2022.

At 9 Months	27.7 (20.5, 35.4)	16.6 (10.6, 23.8)	
At 12 Months	22.0 (15.1, 29.8)	7.0 (2.7, 14.0)	

PFS is defined as the number of months (30.4375 days) from the date of randomization to the date of the first radiological disease progression per RECIST 1.1 or death due to any cause, whichever comes first. Interim Analysis 1 has data cut at 1/3/2022.
[a] Censoring due to no baseline or no post baseline evaluable assessment does not include death event before the 2nd scheduled visit postbaseline.
[b] Median PFS is from Kaplan-Meier estimate. CI for median is computed using the Brookmeyer-Crowley method. NE = Not Estimable.
[c] Stratified log-rank test and stratified Cox regression adjusted for stratification factors (IXRS): prior chemotherapy regimens for treatment of metastatic disease (two vs. three/four lines), visceral metastasis (Y/N), and endocrine therapy in the metastatic setting for at least 6 months (Y/N).

Table 15.2.1.6: Progression Free Survival (PFS) per BICR by Selected Subgroup for Interim Analysis 2 Data
ITT Population
Excluding Participants Pre-selected to Gemcitabine

	SG (N=205)	TPC (N=213)	Treatment Comparison
Interaction p-value [a]			0.6916
Stratification factor of prior chemotherapy regimens for treatment of metastatic disease: 2			
Total Patients	96	102	
Patients (%) With Events	67 (69.8%)	73 (71.6%)	
Patients (%) Without Events (Censored)	29 (30.2%)	29 (28.4%)	
Median PFS (months) [b]	5.5	4.0	
95% CI	(4.1, 7.5)	(2.7, 4.6)	
Hazard Ratio (Relative to TPC) [c]			0.633
95% CI for Hazard Ratio			(0.452, 0.886)
p-value			0.0073
Stratification factor of prior chemotherapy regimens for treatment of metastatic disease: 3-4			
Total Patients	109	111	
Patients (%) With Events	68 (62.4%)	69 (62.2%)	
Patients (%) Without Events (Censored)	41 (37.6%)	42 (37.8%)	
Median PFS (months) [b]	4.2	4.0	
95% CI	(2.9, 6.7)	(2.7, 4.4)	
Hazard Ratio (Relative to TPC) [c]			0.727
95% CI for Hazard Ratio			(0.515, 1.024)
p-value			0.0678

The denominator is the number of patients in the ITT excluding those pre-assigned to Gemcitabine for each treatment arm per category in each subgroup.
PFS is defined as the number of months (30.4375 days) from the date of randomization to the date of the first radiological disease progression per RECIST 1.1 or death due to any cause, whichever comes first. Interim Analysis 2 has data cut at 7/1/2022.
[a] Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
[b] Median PFS is from Kaplan-Meier estimate. CI for median is computed using the Brookmeyer-Crowley method. NE = Not Estimable.
[c] Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.

Hazard Ratio (Relative to TPC) [c]			0.741
95% CI for Hazard Ratio			(0.503, 1.092)
p-value			0.1270

The denominator is the number of patients in the ITT excluding those pre-assigned to Gemcitabine for each treatment arm per category in each subgroup.
PFS is defined as the number of months (30.4375 days) from the date of randomization to the date of the first radiological disease progression per RECIST 1.1 or death due to any cause, whichever comes first. Interim Analysis 2 has data cut at 7/1/2022.
[a] Interaction p-value is from Cox regression with treatment, subgroup and treatment*subgroup interaction as covariates.
[b] Median PFS is from Kaplan-Meier estimate. CI for median is computed using the Brookmeyer-Crowley method. NE = Not Estimable.
[c] Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.

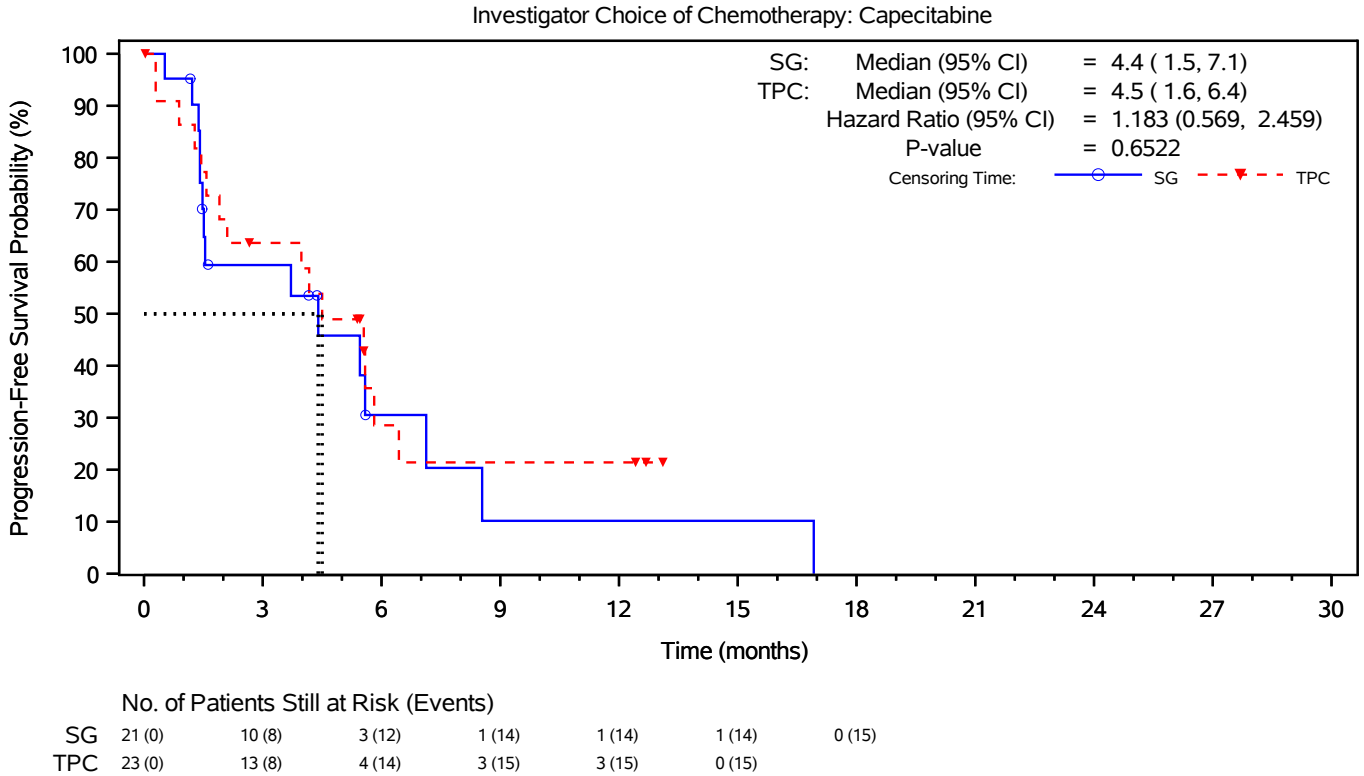
Figure 15.2.1.4.13: Kaplan-Meier Estimates of PFS per BICR for Interim Analysis 2 Data by Investigator Choice of Chemotherapy Prior to Randomization
ITT Population
Excluding participants pre-selected to Gemcitabine



The analysis is based on Interim 2 data cut at 01Jul2022.
Hazard ratios and CIs are from an unstratified Cox regression analysis. P-values are from an unstratified log-rank test.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Table 15.2.3.1: Objective Response Rate (ORR), Clinical Benefit Rate (CBR) and Best Overall Response (BOR) per BICR
ITT Population
Excluding participants pre-selected to Gemcitabine

	SG (N = 205)	TPC (N = 213)	Treatment Comparison
Patients with Measurable Disease at Baseline	203	210	
Objective Response (CR or PR)			
n (%)	43 (21.0%)	32 (15.0%)	
95% CI (Exact)	(15.6, 27.2)	(10.5, 20.5)	
Odds Ratio			1.501
95% CI			(0.909, 2.479)
P-value			0.1101
Relative Risk (RR)			1.399
95% CI (Exact)			(0.924, 2.120)
P-value			0.1101
Risk Difference (RD)			0.060
95% CI (Wald)			(-0.014, 0.134)
P-value			0.1111

The denominator is the number of patients in the ITT Population excluding participants assigned to Gemcitabine before randomized for each treatment group.
The best overall response is derived based on the tumor response per BICR at each tumor assessment according to RECIST 1.1. Response of CR and PR is confirmed no less than 4 weeks later. SD requires a minimum duration of 6 weeks to be classified as SD.
Clinical benefit rate (CBR) is defined as the proportion of participants who have best confirmed response as CR/PR or durable SD with duration >= 6 months
CIs for odds ratio and RR are from stratified Cochran-Mantel-Haenszel method, CIs for RD are derived from Wald method.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Table 15.2.4.1: Duration of Response (DOR) for Objective Responders per Blinded Independent Central Review (BICR)
ITT Population
Only including participants with Confirmed Objective Response but excluding participants pre-selected to Gemcitabine

	SG (N = 43)	TPC (N = 32)	Treatment Comparison
Number of Responders (CR or PR)	43	32	
Subjects With Events [n(%)]	25 (58.1%)	20 (62.5%)	
Subjects Without Events (Censored) [n(%)]	18 (41.9%)	12 (37.5%)	
Median Duration of Response (months) [a]	7.4	5.1	
95% CI	(5.8, 8.9)	(2.9, 7.5)	
Log-rank P-value (Stratified) [b]			0.0212
Stratified Cox Regression analysis [b]			
Hazard Ratio (Relative to TPC)			0.485
95% CI for Hazard Ratio			(0.260, 0.906)
Kaplan-Meier Estimates of DOR Rate (%) (95% CI) [c]			
At 3 Months	92.7 (79.0, 97.6)	67.0 (45.9, 81.3)	
At 6 Months	65.7 (48.1, 78.5)	39.1 (19.8, 58.1)	
At 9 Months	30.9 (14.9, 48.6)	11.4 (2.0, 29.8)	
At 12 Months	22.1 (8.5, 39.6)	NE (NE, NE)	

The denominator is the number of patients in the ITT Population excluding participants assigned to Gemcitabine before randomized for each treatment group.
Only patients achieving confirmed CR or PR are included in the analysis. DOR is defined as the number of months (30.4375 days) from the date of initial response to the date of the event defined as the first documented progression per RECIST 1.1 or death due to any cause, whichever is earlier.
[a] Median DOR is from Kaplan-Meier estimate. CI for median is computed using the Brookmeyer-Crowley method. NE=Not Estimable.
[b] Stratified log-rank test and stratified Cox regression adjusted for stratification factors (IXRS): prior chemotherapy regimens for treatment of metastatic disease (two vs. three/four lines), visceral metastasis (Y/N), and endocrine therapy in the metastatic setting for at least 6 months (Y/N).

Table 15.2.3.2: Objective Response Rate (ORR), Clinical Benefit Rate (CBR) per BICR by Selected Subgroup
ITT Population
Excluding participants pre-selected to Gemcitabine

	SG (N=205)	TPC (N=213)	Treatment Comparison
Subgroup: Stratification factor of visceral metastasis			
ORR Relative Risk Cochran's Q p-value			0.8265
CBR Relative Risk Cochran's Q p-value			0.7358
Stratification factor of visceral metastasis: Yes	196	205	
Objective Response (CR or PR)			
n (%)	41 (20.9%)	31 (15.1%)	
95% CI (Exact)	(15.4, 27.3)	(10.5, 20.8)	
Odds Ratio			1.485
95% CI (Exact)			(0.888, 2.483)
P-value			0.1311
Relative Risk			1.383
95% CI (Exact)			(0.906, 2.113)
P-value			0.1311
Risk Difference			0.058
95% CI (Wald)			(-0.017, 0.133)

The denominator is the number of patients in the ITT excluding those pre-assigned to Gemcitabine for each treatment arm per category in each subgroup.
Odds ratio and relative risk CIs and p-values are from unstratified CMH method, risk difference CI is from Wald method.
The best overall response is derived based on the tumor response per BICR at each tumor assessment according to RECIST 1.1. Response of CR
Clinical benefit rate (CBR) is the proportion of participants who have best confirmed response as CR/PR or durable SD with duration >= 6 months
The analysis is based on Interim 2 data cut at 7/1/2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

The denominator is the number of patients in the ITT excluding those pre-assigned to Gemcitabine for each treatment arm per category in each subgroup.
Odds ratio and relative risk CIs and p-values are from unstratified CMH method, risk difference CI is from Wald method.
The best overall response is derived based on the tumor response per BICR at each tumor assessment according to RECIST 1.1. Response of CR
Clinical benefit rate (CBR) is the proportion of participants who have best confirmed response as CR/PR or durable SD with duration >= 6 months
The analysis is based on Interim 2 data cut at 7/1/2022.

SD >= 6 months	**15 (18.8%)**	**7 (8.4%)**	
Progressive Disease (PD)	**16 (20.0%)**	**20 (24.1%)**	
Not Evaluable	**6 (7.5%)**	**23 (27.7%)**	

The denominator is the number of patients in the ITT excluding those pre-assigned to Gemcitabine for each treatment arm per category in each subgroup.
Odds ratio and relative risk CIs and p-values are from unstratified CMH method, risk difference CI is from Wald method.
The best overall response is derived based on the tumor response per BICR at each tumor assessment according to RECIST 1.1. Response of CR
Clinical benefit rate (CBR) is the proportion of participants who have best confirmed response as CR/PR or durable SD with duration >= 6 months
The analysis is based on Interim 2 data cut at 7/1/2022.

Excluding participants pre-selected to Gemcitabine

	SG (N=205)	TPC (N=213)	Treatment Comparison
Baseline documented Target or Non-target liver lesions per RECIST1.1 per Local Investigator Review (LIR): No	24	26	
Clinical Benefit Rate (CR, PR, or SD >= 6 months)			
n (%)	13 (54.2%)	7 (26.9%)	
95% CI (Exact)	(32.8, 74.4)	(11.6, 47.8)	
Odds Ratio			3.208
95% CI (Exact)			(0.984, 10.454)
P-value			0.0518
Relative Risk			2.012
95% CI (Exact)			(0.967, 4.185)
P-value			0.0518
Risk Difference			0.272
95% CI (Wald)			(0.010, 0.535)
Best Overall Response, n (%)			
Complete Response (CR)	0	0	
Partial Response (PR)	7 (29.2%)	3 (11.5%)	
Stable Disease (SD)	14 (58.3%)	9 (34.6%)	
SD >= 6 months	6 (25.0%)	4 (15.4%)	
Progressive Disease (PD)	3 (12.5%)	9 (34.6%)	
Not Evaluable	0	5 (19.2%)	

The denominator is the number of patients in the ITT excluding those pre-assigned to Gemcitabine for each treatment arm per category in each subgroup.
Odds ratio and relative risk CIs and p-values are from unstratified CMH method, risk difference CI is from Wald method.
The best overall response is derived based on the tumor response per BICR at each tumor assessment according to RECIST 1.1. Response of CR
Clinical benefit rate (CBR) is the proportion of participants who have best confirmed response as CR/PR or durable SD with duration >= 6 months
The analysis is based on Interim 2 data cut at 7/1/2022.

The best overall response is derived based on the tumor response per BICR at each tumor assessment according to RECIST 1.1. Response of CR
Clinical benefit rate (CBR) is the proportion of participants who have best confirmed response as CR/PR or durable SD with duration >= 6 months
The analysis is based on Interim 2 data cut at 7/1/2022.

Data Extracted: 28FEB2022, Data Cut Date 1 (PFS FA/OS IA1): 03JAN2022. Data Extracted: 09AUG2022, Data Cut Date 2 (SUR/OS IA2): 01JUL2022

Note: "Intent-to-Treat Population" is defined as all randomized subjects. A subject is considered having an evaluable assessment of EORTC QLQ-C30 if at least one of the 15 domains/scales were completed at a given assessment. The denominator for Cycle 1 Day 1 (C1D1) visit is estimated based on the number of ITT population. The denominator for C2D1, C3D1, etc. visits is estimated based on the number of ITT population having at least one dose at or after Cycle 2, 3, etc., respectively, or having an valid assessment at that visit. The denominator for EOT visit is estimated based on the number of ITT population with treatment discontinuation and still being followed after the date of last dose plus 30 days or having an HRQoL evaluable assessment at the EOT visit.
EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Intent-to-Treat Population" is defined as all randomized subjects. A subject is considered having an evaluable assessment of EQ-VAS if no missing EQ-VAS value at a given assessment. The denominator for Cycle 1 Day 1 (C1D1) visit is estimated based on the number of ITT population. The denominator for C2D1, C3D1, etc. visits is estimated based on the number of ITT population having at least one dose at or after Cycle 2, 3, etc., respectively, or having an valid assessment at that visit. The denominator for EOT visit is estimated based on the number of ITT population with treatment discontinuation and still being followed after the date of last dose plus 30 days or having an HRQoL evaluable assessment at the EOT visit. SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = visual analog scale.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

		P-value [b]			NE			
		Effect Size (95% CI) [c]			NE (NE, NE)			

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

		Effect Size (95% CI) [c]			0.18 (-0.03, 0.39)			

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

		P-value [b]			0.021			
		Effect Size (95% CI) [c]			-2.89 (-3.20, -2.59)			

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

		Effect Size (95% CI) [c]			0.00 (-0.21, 0.21)			

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

		Effect Size (95% CI) [c]			2.64 (2.35, 2.93)			

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. CI = Confidence Interval; Diff = Difference; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; NE = Not Estimable; QoL = quality of life; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.

[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.

[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

		Effect Size (95% CI) [c]			0.17 (-0.05, 0.38)			

Note: "EQ-5D-5L Evaluable population" is defined as ITT subjects who completed at least one of the 5 dimensions or VAS score at baseline and at least one evaluable assessment at post-baseline visits based on EQ-5D-5L. CI = Confidence Interval; Diff = Difference; EQ-5D-5L = EuroQoL Five Dimensions, Five Levels questionnaire; NE = Not Estimable; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = visual analog scale.
[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.
[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.
[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

Note: "EQ-5D-5L Evaluable population" is defined as ITT subjects who completed at least one of the 5 dimensions or VAS score at baseline and at least one evaluable assessment at post-baseline visits based on EQ-5D-5L. CI = Confidence Interval; Diff = Difference; EQ-5D-5L = EuroQoL Five Dimensions, Five Levels questionnaire; NE = Not Estimable; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = visual analog scale.
[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.
[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.
[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

		Effect Size (95% CI) [c]			NE (NE, NE)			

Note: "EQ-5D-5L Evaluable population" is defined as ITT subjects who completed at least one of the 5 dimensions or VAS score at baseline and at least one evaluable assessment at post-baseline visits based on EQ-5D-5L. CI = Confidence Interval; Diff = Difference; EQ-5D-5L = EuroQoL Five Dimensions, Five Levels questionnaire; NE = Not Estimable; SD = standard deviation; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = visual analog scale.
[a] The mean difference, 95% CI and p-value are calculated based on a paired, 2-sided t-test for the within-group change from baseline.
[b] The mean difference, 95% CI and p-value are calculated based on a pooled 2-sample, 2-sided t-test for the difference in mean change from baseline between SG and TPC.
[c] Effect sizes and CIs of difference in mean change between SG and TPC are estimated using the Hedges' g.

		Worsened by 1 Category	8 (10.7%)	10 (18.9%)	18 (14.1%)
		No Change	41 (54.7%)	20 (37.7%)	61 (47.7%)
		Improved by ≥1 Categories	24 (32.0%)	23 (43.4%)	47 (36.7%)

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

		No Change	2 (100.0%)	0 (NE)	2 (100.0%)
		Improved by ≥1 Categories	0 (0.0%)	0 (NE)	0 (0.0%)

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Note: "Safety population" is defined as all ITT subjects who have received at least one dose of study drug. The denominator for the percentage calculation in each response category is based on the number of Safety Population subjects with non-missing scores at both baseline and at least one post-baseline visit (including the EOT visit). PRO-CTCAE = PRO version of the Common Terminology Criteria for Adverse Events; NE = Not Estimable; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

Table 15.15.5
Distribution of Change in Response Categories from Baseline for PRO-CTCAE Items
Safety Population
Excluding Subjects for whom Gemcitabine was selected as TPC Prior to Randomization

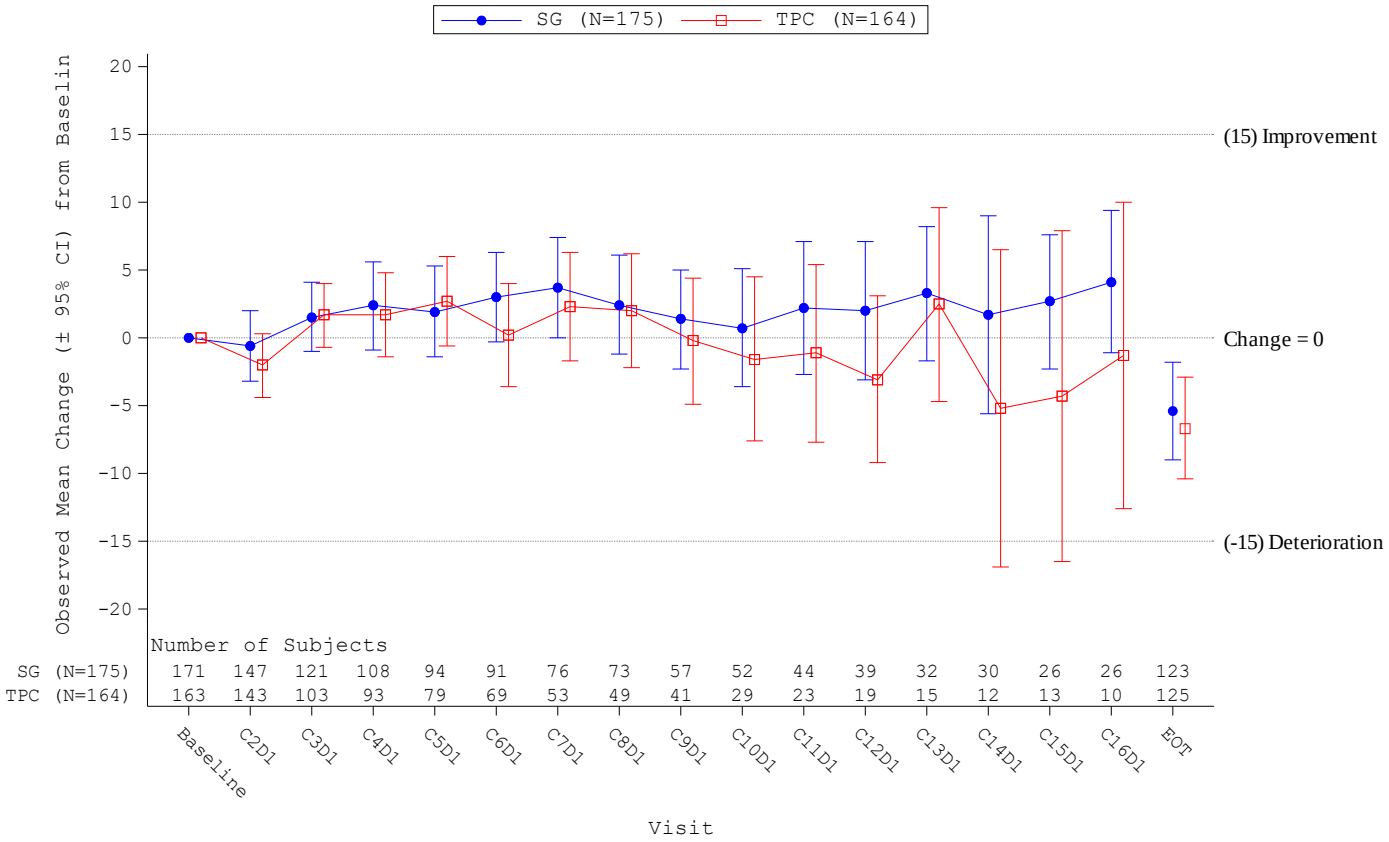
Figure 15.15.1.2
Observed Mean Change from Baseline in EQ-5D VAS by Visit and Treatment Group
EQ-5D-5L Evaluable Population
Excluding Subjects for Whom Gemcitabine was selected as TPC Prior to Randomization



Note: "EQ-5D-5L Evaluable population" is defined as ITT subjects who completed at least one of the 5 dimensions or VAS score at baseline and at least one evaluable assessment at post-baseline visits based on EQ-5D-5L. Changes from baseline are used as the dependent variable. Results are presented up to the visit with n ≥10 for each treatment arm. EQ-5D-5L = EuroQoL Five Dimensions, Five Levels questionnaire; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = visual analog scale.

* Indicates a statistically significant difference in observed mean change from baseline between treatment arms (SG vs. TPC) at a specific post-baseline assessment visit based on a 2-sample 2-sided t-test.

Anhang 4-G 6.3: Zeit bis zur Verschlechterung EQ-5D VAS

Table 15.15.6.2
Summary of Time to First HRQoL Worsening for EQ-5D VAS - Death Being Censored
EQ-5D-5L Evaluable Population
Excluding Subjects for whom Gemcitabine was selected as TPC Prior to Randomization
Subjects with very poor baseline scores were excluded

Domain	Statistic	SG (N=175)	TPC (N=164)	Treatment Comparison
EQ-5D VAS	Patients With Events (%)	63 (37.5)	64 (39.5)	
	Patients Without Events (Censored) (%)	105 (62.5)	98 (60.5)	
	Median Time (months) [a]	11.8	7.0	
	95% CI	(6.9, NE)	(4.6, 12.7)	
	Log-rank p-value (Stratified) [b]			0.0730
	Stratified Cox Regression Analysis [c]			
	Hazard Ratio (Relative to TPC)			0.724
	95% CI for Hazard Ratio			(0.507, 1.033)

Note: "EQ-5D-5L Evaluable population" is defined as ITT subjects who completed at least one of the 5 dimensions or VAS score at baseline and at least one evaluable assessment at post-baseline visits based on EQ-5D-5L. A clinically meaningful worsening is defined as at least 15 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EQ-5D-5L = EuroQoL Five Dimensions, Five Levels questionnaire; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = visual analog scale.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from stratified log-rank test stratified with randomization stratification factors.

[c] HR and 95% CI are estimated using a stratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate and thenumber of prior chemotherapy regimens for treatment of metastatic disease (two vs. three/four lines), visceral metastasis (Yes/No), and endocrine therapy in the metastatic setting for ≥6 months (Yes/No) as stratification factors in the model.

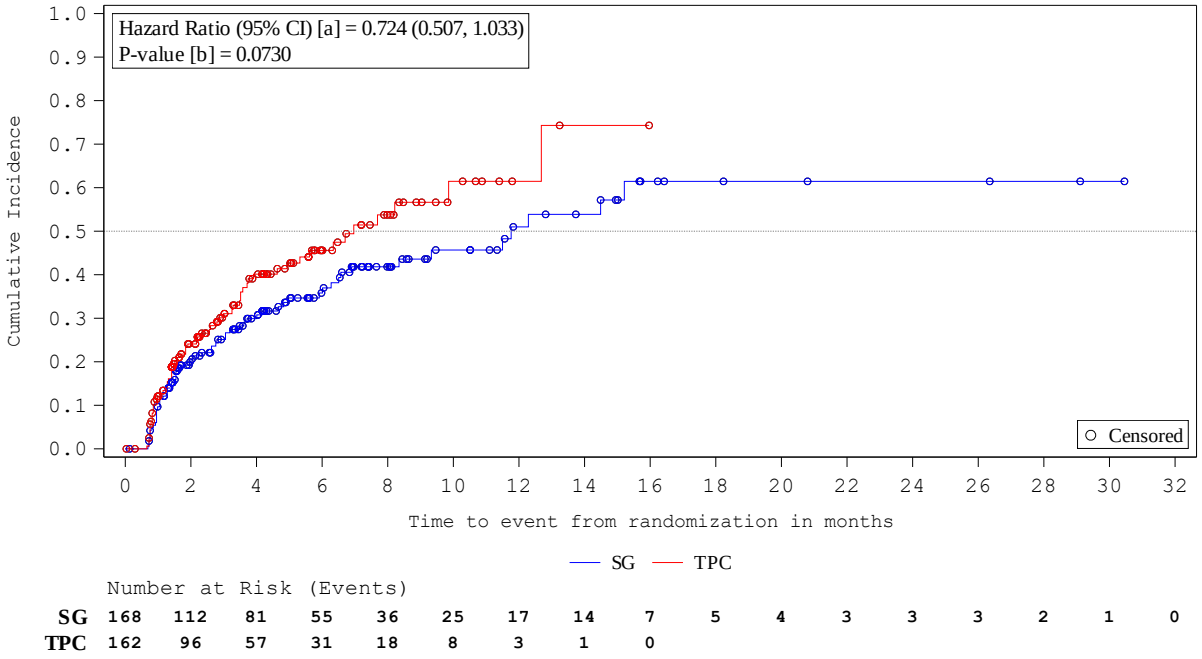
Figure 15.15.4.2
Kaplan-Meier Plot of Time to First Worsening in EQ-5D VAS by Treatment Group - Death Being Censored
EQ-5D-5L Evaluable Population
Excluding Subjects for Whom Gemcitabine was selected as TPC Prior to Randomization
Subjects with very poor baseline scores were excluded



Number at Risk (Events)

SG	168	112	81	55	36	25	17	14	7	5	4	3	3	3	2	1	0
TPC	162	96	57	31	18	8	3	1	0								

Note: "EQ-5D-5L Evaluable population" is defined as ITT subjects who completed at least one of the 5 dimensions or VAS score at baseline and at least one evaluable assessment at post-baseline visits based on EQ-5D-5L. A clinically meaningful worsening is defined as at least 15 points of worsening from baseline for EQ-5D VAS.
CI = Confidence Interval; EQ-5D-5L = EuroQoL Five Dimensions, Five Levels questionnaire; HR = Hazard Ratio; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice; VAS = visual analog scale.
[a] HR and 95% CI are estimated using a stratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate and the number of prior chemotherapy regimens for treatment of metastatic disease (two vs. three/four lines), visceral metastasis (Yes/No), and endocrine therapy in the metastatic setting for ≥6 months (Yes/No) as stratification factors in the model.
[b] P-value is estimated from stratified log-rank test stratified with randomization stratification factors.

A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from stratified log-rank test stratified with randomization stratification factors.

[c] HR and 95% CI are estimated using a stratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate and the number of prior chemotherapy regimens for treatment of metastatic disease (two vs. three/four lines), visceral metastasis (Yes/No), and endocrine therapy in the metastatic setting for ≥6 months (Yes/No) as stratification factors in the model.

Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; HR = Hazard Ratio; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.
[a] HR and 95% CI are estimated using a stratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate and the number of prior chemotherapy regimens for treatment of metastatic disease (two vs. three/four lines), visceral metastasis (Yes/No), and endocrine therapy in the metastatic setting for ≥6 months (Yes/No) as stratification factors in the model.
[b] P-value is estimated from stratified log-rank test stratified with randomization stratification factors.

		Hazard Ratio (Relative to TPC)			0.604
		95% CI for Hazard Ratio			(0.369, 0.987)

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.

Note: "EORTC QLQ-C30 Evaluable population" is defined as ITT subjects who completed at least one of the 15 domains/scales at baseline and at least one evaluable assessment at post-baseline visits based on EORTC QLQ-C30. A clinically meaningful deterioration is defined as at least 10 points of worsening from baseline. Death is censored at the time of the last non-missing HRQoL assessment prior to death in the analysis. CI = Confidence Interval; EORTC QLQ-C30 = European Organization for Research and Treatment of Cancer Quality-of-Life Core 30 questionnaire; QoL = Quality of Life; SG = Sacituzumab Govitecan; TPC = Treatment Physician Choice.

[a] Median Time is from Kaplan-Meier estimate.

[b] P-value is estimated from unstratified log-rank test.

[c] HR and 95% CI are estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC) as covariate.

[d] P-value is estimated using an unstratified Cox proportional hazards regression analysis with treatment arm (SG vs. TPC), subgroup, and treatment*subgroup as covariates.
