-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-Only AEs occured to non-infused patients are summarized.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-Only AEs occured to non-infused patients are summarized.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency

of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received

and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 208e
Adverse events at anytime post-enrollment by primary system organ class, preferred term, maximum CTC grade and Response status at study entry
Enrolled set

Response status at study entry: Primary refractory

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 208j
Adverse events at anytime post-enrollment by primary system organ class, preferred term, maximum CTC grade and Complex Karyotypes

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 208j

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received

and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 208l

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.

-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 208n
Adverse events at anytime post-enrollment by primary system organ class, preferred term, maximum CTC grade and Baseline bone marrow tumor burden
Enrolled set

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 208p
Adverse events at anytime post-enrollment by primary system organ class, preferred term, maximum CTC grade and Down syndrome

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.

-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency

of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 209a
Serious adverse events post CTL019 infusion, regardless of study drug relationship, by primary system organ class, preferred term, maximum CTC grade and Age
Safety Set

Timing: within 8 weeks post infusion, Age: <10 years

	All patients N=33		
Group term Preferred term	**All grades n (%)**	**Grade 3 n (%)**	**Grade 4 n (%)**

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.

-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 209e
Serious adverse events post CTL019 infusion, regardless of study drug relationship, by primary system organ class, preferred term, maximum CTC grade and Response status at study entry
Safety Set

Timing: within 8 weeks post infusion, Response status at study entry: Primary refractory

		All patients N=6	
Group term Preferred term	**All grades n (%)**	**Grade 3 n (%)**	**Grade 4 n (%)**
Number of patients with at least one SAE	5 (83.3)	1 (16.7)	3 (50.0)
Blood and lymphatic system disorders

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Group term Preferred term	**All grades n (%)**	**Grade 3 n (%)**	**Grade 4 n (%)**
Vascular disorders			
-Total	9 (11.5)	1 (1.3)	8 (10.3)
Hypotension	8 (10.3)	1 (1.3)	7 (9.0)
Venoocclusive disease	1 (1.3)	0	1 (1.3)

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 209g
Serious adverse events post CTL019 infusion, regardless of study drug relationship, by primary system organ class, preferred term, maximum CTC grade and MLL rearrangement
Safety Set

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Rhinovirus infection	1 (14.3)	1 (14.3)	0

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Respiratory failure	1 (3.3)	0	1 (3.3)

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.

-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Respiratory failure	1 (2.2)	0	1 (2.2)

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility
- Only AEs started prior to any study treatment, i.e. prior to lymphodepleting chemotherapy and CTL019 infusion, are summarized.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-Only AEs occured to non-infused patients are summarized.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 213g
Serious adverse events at anytime post-enrollment by primary system organ class, preferred term, maximum CTC grade and MLL rearrangement

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.

-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

-Enrolled set = All patients who meet all inclusion/exclusion criteria, and whose apheresis product is received and accepted by the manufacturing facility.
-A patient with multiple adverse events within a primary system organ class is counted only once in the total row.
-A patient with multiple occurrences of an AE is counted only once in the AE category at the maximum toxicity grade.
-System organ classes are presented in alphabetical order; preferred terms are presented in descending frequency of all grades column, as reported in the All patients column.
-MedDRA version 25.1 and CTCAE version 4.03 have been used for the reporting of adverse events.

Table 213r
Serious adverse events at anytime post-enrollment by primary system organ class, preferred term, maximum CTC grade and Number of previous relapses
