Note: Baseline score refers to the last assessment value prior to C1D1 dosing in part 2 of the study.
[1] Two-sided p-values for treatment-by-subgroup interaction are from ANCOVA model with randomization stratification factor (Serum tryptase <20 ng/mL vs. >=20 ng/mL), Baseline ISM status (moderate vs. severe), treatment, subgroup, treatment*subgroup in the model.
[2] Change from baseline summary and difference of mean change from baseline between Avapritinib 25mg and Placebo are from least squares mean estimation of the ANCOVA model that controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
[3] Two-sided p-value from ANCOVA model controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).

Note: Baseline score refers to the last assessment value prior to C1D1 dosing in part 2 of the study.
[1] Two-sided p-values for treatment-by-subgroup interaction are from ANCOVA model with randomization stratification factor (Serum tryptase <20 ng/mL vs. >=20 ng/mL), Baseline ISM status (moderate vs. severe), treatment, subgroup, treatment*subgroup in the model.
[2] Change from baseline summary and difference of mean change from baseline between Avapritinib 25mg and Placebo are from least squares mean estimation of the ANCOVA model that controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
[3] Two-sided p-value from ANCOVA model controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).

Table 35.2.10.2.4a
Change from Baseline of SF-12 by Country
Per-Protocol Population, Part 2 (Part 2 Baseline)

Mental Component Summary (MCS) Score

	Country = USA		
	Placebo (N=27)	Avapritinib 25 mg (N=44)	Test of Interaction p-value [1]

By Country subgroup analysis is not performed due to several countries have less than 10 patients.

Abbreviations: SF-12 = Twelve-item Short Form Health Survey, CFB = Change From Baseline, LS Mean = Least Squares Mean, CI = Confidence Interval, NA = Not Available, NE = Not Estimable.
Note: Baseline score refers to the last assessment value prior to C1D1 dosing in part 2 of the study.
[1] Two-sided p-values for treatment-by-subgroup interaction are from ANCOVA model with randomization stratification factor (Serum tryptase <20 ng/mL vs. >=20 ng/mL), Baseline ISM status (moderate vs. severe), treatment, subgroup, treatment*subgroup in the model.
[2] Change from baseline summary and difference of mean change from baseline between Avapritinib 25mg and Placebo are from least squares mean estimation of the ANCOVA model that controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
[3] Two-sided p-value from ANCOVA model controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).

Note: Baseline score refers to the last assessment value prior to C1D1 dosing in part 2 of the study.
[1] Two-sided p-values for treatment-by-subgroup interaction are from ANCOVA model with randomization stratification factor (Serum tryptase <20 ng/mL vs. >=20 ng/mL), Baseline ISM status (moderate vs. severe), treatment, subgroup, treatment*subgroup in the model.
[2] Change from baseline summary and difference of mean change from baseline between Avapritinib 25mg and Placebo are from least squares mean estimation of the ANCOVA model that controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
[3] Two-sided p-value from ANCOVA model controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).

Note: Baseline score refers to the last assessment value prior to C1D1 dosing in part 2 of the study.
[1] Two-sided p-values for treatment-by-subgroup interaction are from ANCOVA model with randomization stratification factor (Serum tryptase <20 ng/mL vs. >=20 ng/mL), Baseline ISM status (moderate vs. severe), treatment, subgroup, treatment*subgroup in the model.
[2] Change from baseline summary and difference of mean change from baseline between Avapritinib 25mg and Placebo are from least squares mean estimation of the ANCOVA model that controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
[3] Two-sided p-value from ANCOVA model controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Odds Ratio (95% CIs) [1], P-Value		NE (NE, NE), 0.152		0.552 (0.034, 9.007), 0.672	
Relative Risk (95% CIs) [2], P-Value		NE (NE, NE), NE		0.557 (0.036, 8.724), 0.677	
Risk Difference (95% CIs) [2], P-Value		-0.077 (-0.222, 0.068), 0.298		-0.008 (-0.049, 0.033), 0.696	

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note: All Adverse Events are Treatment Emergent Adverse Events. Treatment Emergent AE is defined as any AE that occurred between the Part 2 D1 through a day prior to Part 3 D1, or through 30 days after the last dose if patient do not rollover to part 3.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Relative Risk (95% CIs) [2], P-Value		3.692 (0.466, 29.281), 0.216		0.493 (0.131, 1.855), 0.296	
Risk Difference (95% CIs) [2], P-Value		0.084 (-0.022, 0.190), 0.119		-0.058 (-0.176, 0.060), 0.337	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/system organ class.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Summary of Adverse Events of Special Interest by Category and Preferred Term
by Sex
Per Protocol Population, Part 2 (Part 2 Baseline)

AESI Category Preferred Term	Male Placebo (N=15)	Male Avapritinib 25 mg (N=35)	Female Placebo (N=52)	Female Avapritinib 25 mg (N=88)	P-Value [3]
Cognitive Effects (cont.)					
Confusional state, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Delirium, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Dementia, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Personality change, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Psychotic disorder, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.
