Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Relative Risk (95% CIs) [2], P-Value		NE (NE, NE), NE		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		0.053 (-0.048, 0.153), 0.304		NA (NA, NA), NA	
Mental impairment, n (%)	0	0	1 (1.6)	0	0.980
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NE (NE, NE), 0.190	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NE (NE, NE), NE	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		-0.016 (-0.048, 0.015), 0.313	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Risk Difference (95% CIs) [2], P-Value		-0.018 (-0.053, 0.017), 0.313		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Per Protocol Population, Part 2 (Part 2 Baseline)

AESI Category Preferred Term	<65 Years Placebo (N=56)	<65 Years Avapritinib 25 mg (N=117)	>=65 Years Placebo (N=11)	>=65 Years Avapritinib 25 mg (N=6)	P-Value [3]
Cognitive Effects (cont.)					
Memory impairment, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Mental impairment, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Mood altered, n (%)	0	0	0	0	-
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		-0.019 (-0.054, 0.017), 0.313	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term/category.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Risk Difference (95% CIs) [2], P-Value		-0.009 (-0.048, 0.029), 0.635		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA	

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Summary of Grade 1 and 2 Oedema CMQ by Preferred Term by Country
Per Protocol Population, Part 2 (Part 2 Baseline)

System Organ Class Preferred Term	United Kingdom Placebo (N=5)	United Kingdom Avapritinib 25 mg (N=10)	Canada Placebo (N=5)	Canada Avapritinib 25 mg (N=8)
Eyelid oedema, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Fluid retention, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Swelling of eyelid, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Eye oedema, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Summary of Grade 1 and 2 Oedema CMQ by Preferred Term by Country
Per Protocol Population, Part 2 (Part 2 Baseline)

System Organ Class Preferred Term	Netherlands		Norway	
	Placebo (N=3)	Avapritinib 25 mg (N=7)	Placebo (N=2)	Avapritinib 25 mg (N=5)
Periorbital swelling, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Stoma site oedema, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Swelling face, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Visceral oedema, n (%)	0	0	0	0
Odds Ratio (95% CIs) [1], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Relative Risk (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA
Risk Difference (95% CIs) [2], P-Value		NA (NA, NA), NA		NA (NA, NA), NA

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note1: Adverse events are coded using MedDRA version 25.0.
Note2: A patient is counted only once for multiple events within the same preferred term.
Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Note3: All Adverse Events are Treatment Emergent Adverse Events.
[1] Odds Ratio (OR) is to compare Avapritinib 25 mg with Placebo using odds ratio chi-square test. OR > 1 suggests a higher chance of the event in Avapritinib 25 mg compared to placebo.
[2] Relative Risk (RR) and Risk Difference (RD) are to compare Avapritinib 25 mg with Placebo using two-sample proportions test. RR>1 or RD>0 suggest a higher chance of the event in Avapritinib 25 mg compared to placebo.
[3] Two-sided p-values for treatment-by-subgroup interaction are from logistic regression with treatment, subgroup, treatment*subgroup in the model.

Hazard Ratio (95% CI) [1]		1.897 (0.513, 7.008)		3.568 (0.397, 32.100)
p-value		0.3370		0.2564

Abbreviations: CMQ = Customized MedDRA Queries.
Note: * = censored observation.
Notes: Time to first onset of Oedema CMQ is defined as from day 1 of avapritinib/placebo to the first Oedema CMQ start date. For patients without Oedema CMQ, time to first onset will be censored at the minimum of date of last study drug dose + 30 days, cutoff date, death date, or end of study date.
[1] Hazard Ratio is calculated based on Cox proportional hazards model. HR < 1 suggests that Avapritinib experiences a lower event probability during a unit of time than placebo.
[2] Two-sided p-values for treatment-by-subgroup interaction are from Cox proportional hazards model with treatment, subgroup, treatment*subgroup in the model.

Table 35.3.1.16.6.2.7a
Time to Onset of Oedema CMQ by Prior Cytoreductive Therapy
Per Protocol Population, Part 2 (Part 2 Baseline)

	Yes		No		
	Placebo (N=6)	Avapritinib 25 mg (N=19)	Placebo (N=61)	Avapritinib 25 mg (N=104)	P-Value [2]
Patients with Events (n (%))	0	5 (26.3)	8 (13.1)	29 (27.9)	NA
Patients Censored (n (%))	6 (100)	14 (73.7)	53 (86.9)	75 (72.1)	
Kaplan-Meier Estimates (Months)					
Median (95% CI)	- (-, -)	- (-, -)	6.34 (-, -)	- (-, -)	
25th, 75th percentiles	-, -	5.52, -	6.34, 6.34	3.52, -	
Min, Max	3.88*, 6.21*	0.92, 6.11*	0.10, 6.34	0.03, 6.51*	
3 Months (95% CI)	0.0 (0.0, 0.0)	15.8 (0.0, 32.2)	8.2 (1.3, 15.1)	23.4 (15.2, 31.5)	
6 Months (95% CI)	0.0 (0.0, 0.0)	28.0 (6.9, 49.0)	12.0 (3.6, 20.4)	28.3 (19.6, 37.0)	
9 Months (95% CI)	- (-, -)	- (-, -)	100 (100, 100)	- (-, -)	
12 Months (95% CI)	- (-, -)	- (-, -)	100 (100, 100)	- (-, -)	
Hazard Ratio (95% CI) [1]		- (-, -)		2.294 (1.048, 5.020)	
p-value		NA		0.0377	

Abbreviations: CMQ = Customized MedDRA Queries.
Note: * = censored observation.
Notes: Time to first onset of Oedema CMQ is defined as from day 1 of avapritinib/placebo to the first Oedema CMQ start date. For patients without Oedema CMQ, time to first onset will be censored at the minimum of date of last study drug dose + 30 days, cutoff date, death date, or end of study date.
[1] Hazard Ratio is calculated based on Cox proportional hazards model. HR < 1 suggests that Avapritinib experiences a lower event probability during a unit of time than placebo.
[2] Two-sided p-values for treatment-by-subgroup interaction are from Cox proportional hazards model with treatment, subgroup, treatment*subgroup in the model.

Figure 35.2.7.2.6a
LSMean Plot of PGIC by Baseline Serum Tryptase Level
Per-Protocol Population, Part 2 (Part 2 Baseline)

Patient Global Impression of Change Scale: 1=No change, 2=Almost the same, 3=A little better, 4=Somewhat better, 5=Moderately Better, 6=Better, 7=A great deal better.
Degree of Change is in the range of 0 to 10, with 0 = much better and 10 = much worse.
Program: ../BLU-285/2203_Blinded/CSR/Final/Programs/prod/adhoc/Germany/f-pgic-sum-g-pp-tryp-a.sas Date: 16:31/07AUG2023
