Note: Baseline score refers to the last assessment value prior to C1D1 dosing in part 2 of the study.
[1] Two-sided p-values for treatment-by-subgroup interaction are from ANCOVA model with randomization stratification factor (Serum tryptase <20 ng/mL vs. >=20 ng/mL), Baseline ISM status (moderate vs. severe), treatment, subgroup, treatment*subgroup in the model.
[2] Change from baseline summary and difference of mean change from baseline between Avapritinib 25mg and Placebo are from least squares mean estimation of the ANCOVA model that controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
[3] Two-sided p-value from ANCOVA model controlling for randomization stratification factor (tryptase) and Baseline ISM status (moderate vs severe).
